Services

Certification and referencing

Sames is certified as a training center by the DIRECTE of the Auvergne Rhône Alpes region under the number 84 38 06768 38.

Our company provides, throughout the year, training courses allowing you to acquire the essential know-how for the implementation and maintenance of your equipment in order to guarantee its performance in the long term.

A catalog is available on request.

www.sames.com/france/fr/services-training.html

Line audits

As part of a technical assistance program for our customers using **Sames** equipment, the line audits are intended to help you optimize and control your production tool.

Our network of experts is continuously trained and qualified to provide our customers with technical expertise on the liquid or powder installations in which our equipment is integrated. The global environment of the production lines is taken into account during this technical audit.

A brochure is available for download:

www.sames.com/france/fr/services-service-contract.html

Maintenance program

An annual maintenance program (including or not the consumables to be replaced during each intervention) can be considered with the partnership of **Sames**. It is associated with a preventive maintenance plan established during a first audit visit which details the control points necessary to guarantee the performance of the installed equipment.

1. Health and Safety Instructions

This manual contains links to the following user manuals:

- [see DRT7145](#) for the **Inobox** control module.
- [see DRT7134](#) for the **Inocontroller** control module.

1.1. Configuration of the certified equipment

The whole of these user manuals defines the configuration of the certified equipment.

1.1.1. Applicable Standards

The **Inogun A** projector has been designed according to standards indicated below:

Canadian Standards:

- CSA C22.2 No. 61010-1:12
- CSA C22.2 No. 213:19
- CSA C22.2 No. 0:20
- CSA C22.2 No. 60079-31:15 as a guide
- EN 50177:09 / A1:13 as a guide
- EN 50500-2:18 as a guide

US Standards:

- FANSI/ISA-61010-1: 3rd Ed.
- FM3600: 2018
- FM3611: 2018
- FM 7260: 2018 as a guide
- UL60079-31:2nd Ed. as a guide

Installation:

- In **Canada**, the installation has to be in compliance with the "Code C22.1 Canadian Electrical part I, standard safety for electrical installations".
- In the **USA**, the installation has to be in compliance with "NFPA 70: National Electrical Code".

1.2. Marking

The **Inogun A** projector is classified as "A-P" according to EN50177.

Projectors marking:

The X sign placed after the EU/UK type examination certificate number indicates that this device is subject to special operating conditions:

- This equipment is intended for an ambient temperature range of 0°C to 40°C.
- During the installation, the user will take into consideration that the keypad underwent only a shock corresponding to an energy of a low risk. ([see DRT7145](#))
- The **Inobox** control module has to be protected from light.

Warning markings:

"For Electrostatic Finishing Applications using Class II, spray material when configured according to 800004734", this statement may be abbreviated to read : 'For Electro. Fin. Appl. CL. II, Spray Matl. when configured according to 800004734'.

1.3. Meaning of pictograms

				
Warning electricity	Warning Automatic start-up	Warning Hot surface	Warning Explosive material	General warning sign
				
Warning High pressure	Warning Crushing of hands	Warning for explosive atmospheres	Warning Flammable material	Warning Corrosive substance
				
Warning Toxic material	Warning Harmful products	No access for people with active implanted cardiac devices	Wear ear protection	Wear a face shield
				
Wear respiratory protection	Wear safety footwear	Wear protective clothing	Wear protective gloves	Wear head protection
				
Opaque eye protection must be worn	General mandatory action sign	Connect an earth terminal to the ground	Refer to Instruction manual	

1.4. Precautions for Use

This document contains information that all operators should be aware of and understand before using the projector. This information highlights situations that could result in serious damage and indicates the precautions that should be taken to avoid them.

Before any use of the Inogun A, check that all operators:

- have previously been trained by the company **Sames**, or by their distributors registered by them for this purpose.
- have read and understood the user manual and all rules for installation and operation, as laid out below.

It is the responsibility of the operators' workshop manager to ensure these two points and it is also his responsibility to make sure that all operators have read and understood the user manuals for any peripheral electrical equipment present in the powdering area.

1.5. Warnings

It is imperative that anyone wearing a pacemaker does not use the equipment and does not enter the projection area.

High voltage can cause the pacemaker to malfunction.

This equipment may be hazardous if it is not used, disassembled and reassembled in accordance with the rules indicated in this manual and in any applicable European Standard or national safety regulations.

Equipment performance is only guaranteed if original spare parts distributed by Sames are used.

To guarantee an optimal assembly, spare parts must be stored in a temperature close to their temperature of use. Should the opposite occur, a sufficient waiting time must be observed before the installation, so that all the elements are assembled in the same temperature.

This equipment is intended for spraying powder paint only.

This equipment must only be used in powdering locations according to standard EN 50177 (§ 5.4 and 5.7) and EN 16985. The equipment has to be used only within ventilated in order to reduce risks for the health of the operators, fire or explosion. The efficiency of the extraction ventilation system has to be daily checked.

Within explosive atmospheres produced by the spraying process, only appropriate explosion-proof electrical equipment has to be used.

- 1 The operator must wear shoes according to standard EN ISO 20344 and the insulation resistance measured must not exceed 100 MΩ.
- 2 The protective clothes, including gloves, must conform to standard EN 1149-5 and the insulation resistance measured must not exceed 100 MΩ.
- 3 Using individual protection equipment will limit the risks of contact and/or inhalation of toxic product, gas, vapours, fog or dusts that can be produced while using the equipment. The user has to follow the coating product manufacturer's recommendations.
- 4 Contact or inhalation of the products used with this equipment may be dangerous for personnel (see: safety data sheets for the products used). The pressure coating material or compressed air must not be directed at people or animals.
- 5 The parts to be painted must have a resistance to earth less than or equal to 1 MΩ (measurement voltage of at least 500V or 1000V) (§5.7.3 in standard EN 50177). This must be checked regularly.
- 6 All conductive structures such as floors, powder spray station walls, ceilings, barriers, barriers, parts to be painted, powder dispensing tank placed in or near the work area and the ground terminal of the electro-pneumatic control module must be electrically connected to the grounding system for protecting the power supply. Finally, and for the same reasons, it will be necessary, in the spraying area, to have an antistatic floor such as bare concrete, metal grating, etc...
- 7 Switch off the power supply to the **Inocontroller** or **Inobox** before connecting the **Inogun A** projector. Before disconnecting the projector, disconnect the power supply to the **Inocontroller** or **Inobox** (otherwise, a malfunction may occur).
- 8 It is essential to properly ventilate the spray booths to avoid any powder output and to ensure a powder concentration below the lower explosive limit (LEL). The associated equipment must be placed outside the hazardous areas and its commissioning must be controlled by the operation of the cabin suction fan.
- 9 Powder spraying must be carried out in front of a ventilated station provided for this purpose. The activation of the **Inocontroller** must be controlled by the operation of the ventilation system. The correct operation of the drive must be checked once a week.
- 10 The ambient operating temperature must be between 0 and 40°C.
- 11 The electrostatic powder spraying equipment must be maintained regularly in accordance with the indications and instructions given by **Sames**. Repairs must be carried out in strict accordance with these instructions.
- 12 The electrostatic powder spraying equipment must be maintained regularly in accordance with the indications and instructions given by **Sames**. Repairs must be carried out in strict accordance with these instructions.
- 13 Before cleaning the projectors or doing any other work in the spray area, the power supply to the high-voltage generator must be disconnected, protected against restarting and the HV circuit protected. (projector) discharged to ground.
Cleaning must be carried out in mechanically ventilated areas.

14 Inside the booth it is forbidden to use naked flames, glowing objects or devices likely to produce sparks. It is also forbidden to store flammable products, or recipients that have contained them, in the vicinity of the booth. The surrounding area must be kept clear and clean.

15 In the explosive zone, it is forbidden to use non-certified electrical or non-electrical equipment such as electrical extension cords, multi-sockets, switches, etc.

A warning sign in a language understood by the operator, summarising the safety rules described above, must be prominently displayed in the vicinity of the powder spray station.

1.6. Regulatory tests to be carried out on the equipment according to standard EN 50177

The tests must be carried out on the spraying equipment. The tests must be carried out by competent personnel and include the tests described below (see § 6.2 table 3 in standard EN 50177).

Type of test	Requirements
The fixed inflammable coating powder material electrostatic coating must be tested to ensure it is safe for workers.	In this context, and particularly for the disconnection threshold, the overload current $I_{\text{ü}}$ and the minimum voltage U_{min} must be defined and documented in relation to the operational and local conditions (see also § 5.2.2 in standard EN50177).
Forced ventilation effectiveness (air extraction systems)	See §5.4.4 in standard EN50177
The safe high voltage disconnection must be tested for operation under controlled voltage and under constant voltage.	See 5.2.2 and 5.2.2.1 in standard EN50177. The disconnection threshold $I_{\text{ü}}$ must be defined and documented in relation to the operational and local conditions. It must be tested if the high voltage is disconnected and if there is an unacceptable increase in the operating current I_b and if the disconnection threshold $I_{\text{ü}}$ is reached. In this context, the disconnection threshold $I_{\text{ü}}$ defined during the initial test must be checked. A disconnection threshold $I_{\text{ü}}$ that may increase the possibility of dangerous discharges or electrical flashovers between the parts under high voltage and the grounded parts if the safe distance falls below its permitted value is not permitted.
3D category devices	See 5.2.2 and 5.2.2.1 in standard EN50177
2D category devices	See 5.2.2, 5.2.2.1 and 6.3 in standard EN50177

Type of test	Requirements
For the operation at constant current, the safe disconnection of the high voltage electricity supply must be tested.	See 5.2.2 and 5.2.2.2 in standard EN50177 The disconnection threshold I_{dL} must be defined and documented in relation to the operational and local conditions. Checks must be carried out to ensure that the high voltage is disconnected if the high voltage falls unacceptably below the disconnection threshold U_{min} . In this context, the disconnection threshold U_{min} defined during the initial test must be checked. A disconnection threshold U_{min} that may increase the possibility of dangerous discharges or electrical flashovers between the parts under high voltage and the grounded parts if the safe distance falls below its permitted value is not permitted.
3D category devices	See 5.2.2 et 5.2.2.2 in standard EN50177
2D category devices	See 5.2.2, 5.2.2.2 et 6.3 in standard EN50177
Protection against discharge energy which is too high	See 5.2.3 in standard EN50177
Protection against cleaning product inflammation	See 5.2.4. in standard EN50177
Effectiveness of the protection measures against direct contact	See 5.5.2 in standard EN50177
Effectiveness of the earthing measures	See 5.7 in standard EN50177
Slaving / protection against inputs	See 5.5.2 in standard EN50177
Effectiveness of the local fire extinguishing system	See 5.2.5. in standard EN50177 In addition to the location's protection system, local fire extinguishing systems (fixed and dedicated to the object) must provide effective protection for the dangerous zone located between the output from the coating powder and the part to be processed. It must be proven for each individual case that the roles of the local fire extinguishing systems and the location's protection systems may be satisfied by a single extinguishing system.
Other tests	in accordance with standard EN 16985:2018.

These tests must be carried out periodically. The following maximum intervals between tests are recommended (see § 7.2.3 table 4 in standard EN 50177).

Reference	Test frequency
Complete installation safety test in relation to workers	12 months
Forced ventilation effectiveness	in continuous
Disconnection in the event of an overload current	after each start-up
Low voltage disconnection	after each start-up
Discharge energy	weekly
Protection against cleaning product inflammation	before each cleaning
Protection against direct contact	weekly
Earthing measures	weekly
Protection against inputs	weekly
Site's fire extinguishing system	6 months
Other tests	in accordance with standard EN 16985:2018

1.7. Important recommendations

1.7.1. Ventilation

Do not start the powder application with the **Inogun A** projector until the spray booth ventilation system is switched on. If the ventilation is switched off, toxic substances or dust may remain in the spray booth and cause a risk of fire, poisoning or irritation.

1.7.2. O-ring seals

Use the seals recommended in this manual.

1.7.3. Safety devices

When installing the projector, safety devices must be provided.

- Detection of control system faults.
- Detection of high voltage surges associated with the **Sames** HV generator.
- Detection of air pressure drops.
- Detection of ventilation failure.
- Detection of variations in ventilation flow rates.
- Detection of fire.

Failure to install safety devices could result in a risk of fire, expose the personnel to serious injury and damage the equipment.

The electrostatic projection systems must be equipped with an automatic fire extinguishing system (according to § 5.2.5 in standard EN 50177).

1.7.4. Mechanical collision

The guarantee does not cover damage resulting from the operating environment (for example: collision with the robot).

1.7.5. Ambient temperature

The atomizer is designed to normally operate at an ambient temperature comprised between 0°C and + 40°C. The storage temperature must never exceed +60°C.

1.8. Guarantee

Under the guarantee, which applies only to the buyer, **Sames** agrees to repair operating faults resulting from a design fault, materials or manufacture, under the conditions set out below.

The guarantee claim must define the exact nature of the fault concerned, in writing.

The **Sames** guarantee only covers equipment that has been serviced and cleaned according to standard procedures and our own instructions, that has been fitted with parts approved by SAMES KREMLIN or that has not been modified by the customer.

More precisely, the guarantee does not cover damage resulting from:

- the customer's negligence or inattention,
- incorrect use,
- failure to follow procedures,
- use of a control system not designed by **Sames** or a **Sames** control system modified by a third party without written permission from an authorized **Sames** technical agent,
- accidents such as: collision with external objects, or similar events,
- flooding, earthquake, fire or similar events,
- use of seals not complying with **Sames** recommendations,
- pollution of air circuits by fluids or substances other than air.

The **Sames** gun type **Inogun A** is covered by a warranty (refer to the general sales conditions for its application).

The guarantee does not apply to wearing parts such as electrode supports, deflectors, powder tube, seals, etc...

The guarantee will take effect from the date of the first start-up or of the provisional acceptance report.

Under no circumstances, either in the context of this guarantee or in other contexts, will **Sames** be held responsible for physical injury or intangible damage, damage to brand image and loss of production resulting directly from its products.

2. Introduction

The **Inogun A** projector is an automatic projector designed to project powder paint. An ionizing electrode at the end of the projector is set to a high negative electrical potential. Due to the high electric field at the end of this electrode, it creates negative gas ions. These ions allow the powder paint to be sprayed during its transfer from the end of the projector to the part to be painted, which is itself connected to the ground.

The **Inogun A** projector is connected to an **Inocontroller** or **Inobox** control module that controls both the high voltage and the powder output of the projector connected to it. These two indissociable elements constitute a powder coating equipment.

Pre-programmed voltage and current settings can be adjusted from the **Inocontroller** or **Inobox** control module.

Inogun A projectors are of two types:

- The FCC **Inogun A** projector is used in a powder coating booth with quick colour change.
- The **Inogun A** projector in the standard version is used in all other cases. It can be installed either on a reciprocator robot via its support arm or on a 6-axis robot via a robotic support.

There are 3 versions of robotic support:

- 60° support for a projector.
- Twin convergent 60° support for two projectors
- 60° Twin parallel 60° support for two projectors.

3. Characteristics

3.1. Dimensions (mm), straight version

3.2. Dimensions (mm), gravity center for robotic versions

3.2.1. Robotic Single 60° Inogun A

:Output C.S: Wrist Payload CG location

Weight: 1.19 kg

Gravity center (**GC**) in millimeters:

X = 0
Y = 89.9
Z = - 136.2

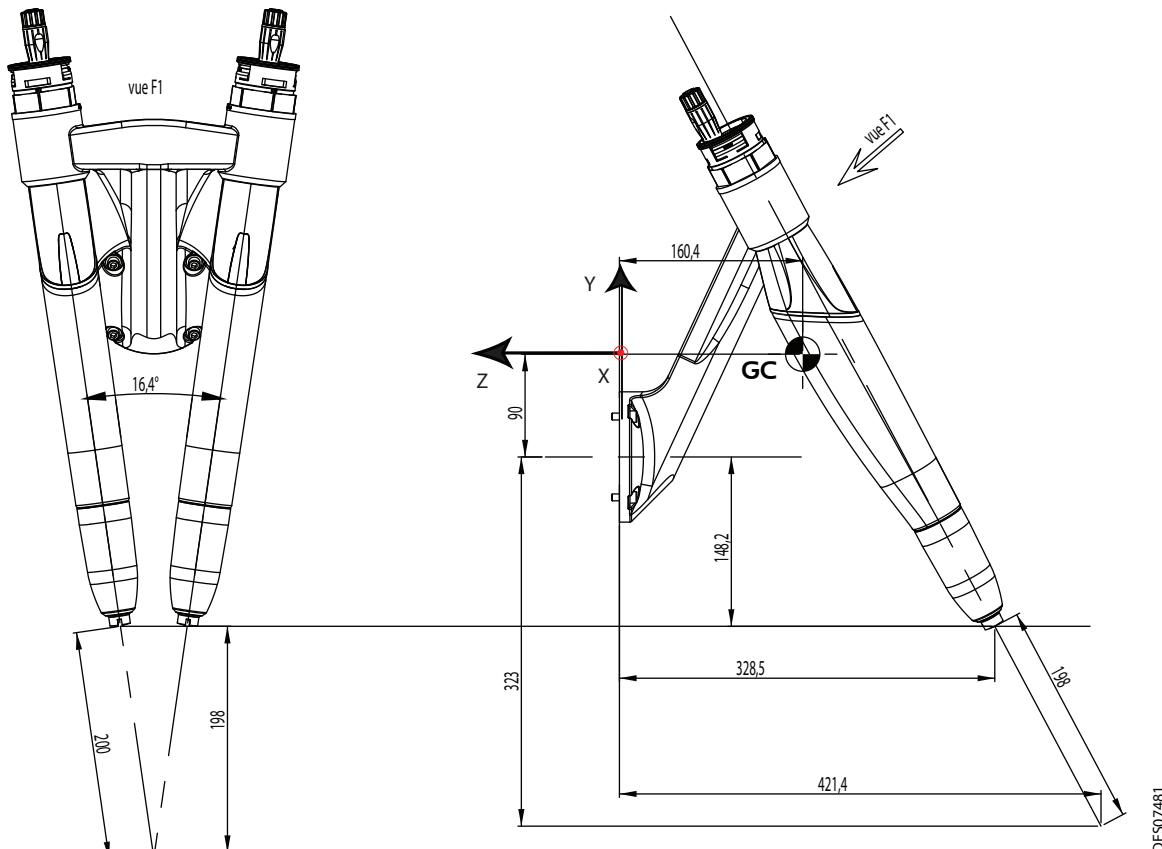

Main inertia axis and moments (kg x mm²) measured to the gravity center:

I _x = (0.00, - 0.75, - 0.67)	P _x = 6123.60
I _y = (0.00, - 0.67, - 0.75)	P _y = 11078.18
I _z = (1.00, 0.00, 0.00)	P _z = 16650.18

Inertia moments (kg x mm²), measured to the output C.S.:

I _{xx} = 39039.37	I _{xy} = -8.31	I _{xz} = - 49.82
I _{yx} = 8.31	I _{yy} = 25686.81	I _{yz} = - 6875.53
I _{zx} = - 49.82	I _{zy} = - 6875.53	I _{zz} = 13904.36

3.2.2. Robotic Twin Convergent 60° Inogun A

Output C.S: Wrist Payload CG location

Weight : 2.2 kg

Gravity center (**GC**) in millimeters:

X = 0

Y = - 90

Z = - 160.4

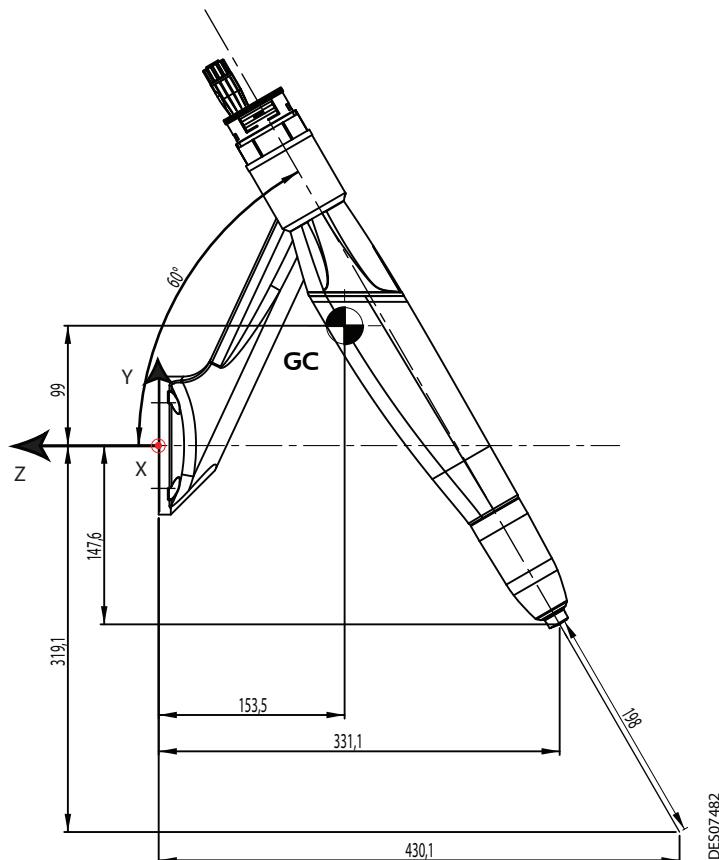

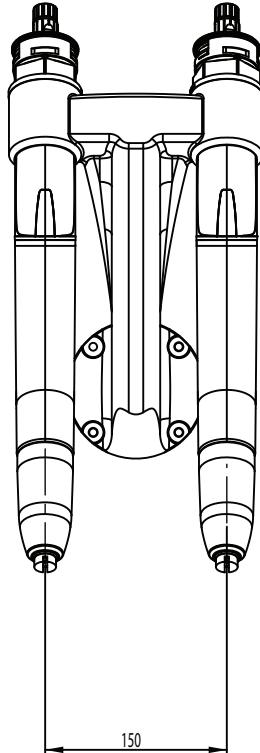

Main inertia axis and moments (kg x mm²) measured to the gravity center:

I _x = (-0.01, -0.88, 0.48)	P _x = 14739.80
I _y = (-0.03, 0.48, 0.88)	P _y = 29969.01
I _z = (-1.00, -0.01, -0.03)	P _z = 30163.49

Inertia moments (kg x mm²), measured to the output C.S:

I _{xx} = 89717.61	I _{xy} = 96.04	I _{xz} = -92.70
I _{yx} = 96.04	I _{yy} = 63587.90	I _{yz} = 18975.02
I _{zx} = -92.70	I _{zy} = 18975.02	I _{zz} = 40677.

3.2.3. Robotic Twin Parallel 60° Inogun A

Output C.S: Wrist Payload CG location

Weight : 2.16 kg

Gravity center (**GC**) in millimeters:

X = 0

Y = 99

Z = - 153.5

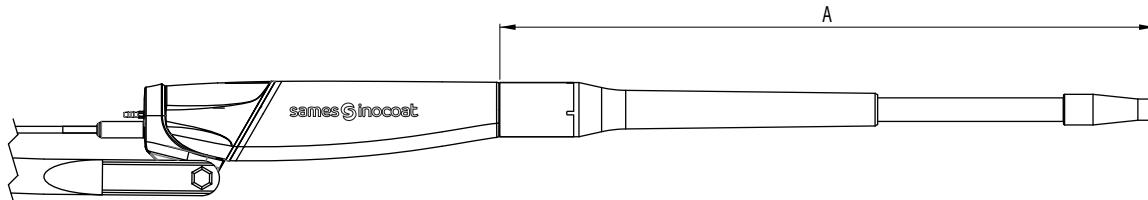

Main inertia axis and moments (kg x mm²) measured to the gravity center:

$I_x = (0.00, -0.86, -0.50)$	$P_x = 16093.73$
$I_y = (-1.00, -0.02, 0.03)$	$P_y = 32002.20$
$I_z = (-0.04, 0.50, -0.86)$	$P_z = 32387.88$

Inertia moments (kg x mm²), measured to the output C.S:

$I_{xx} = 89532.18$	$I_{xy} = -5.02$	$I_{xz} = -91.02$
$I_{yx} = -5.02$	$I_{yy} = 62591.53$	$I_{yz} = -18416.00$
$I_{zx} = -91.02$	$I_{zy} = -18416.00$	$I_{zz} = 43719.47$

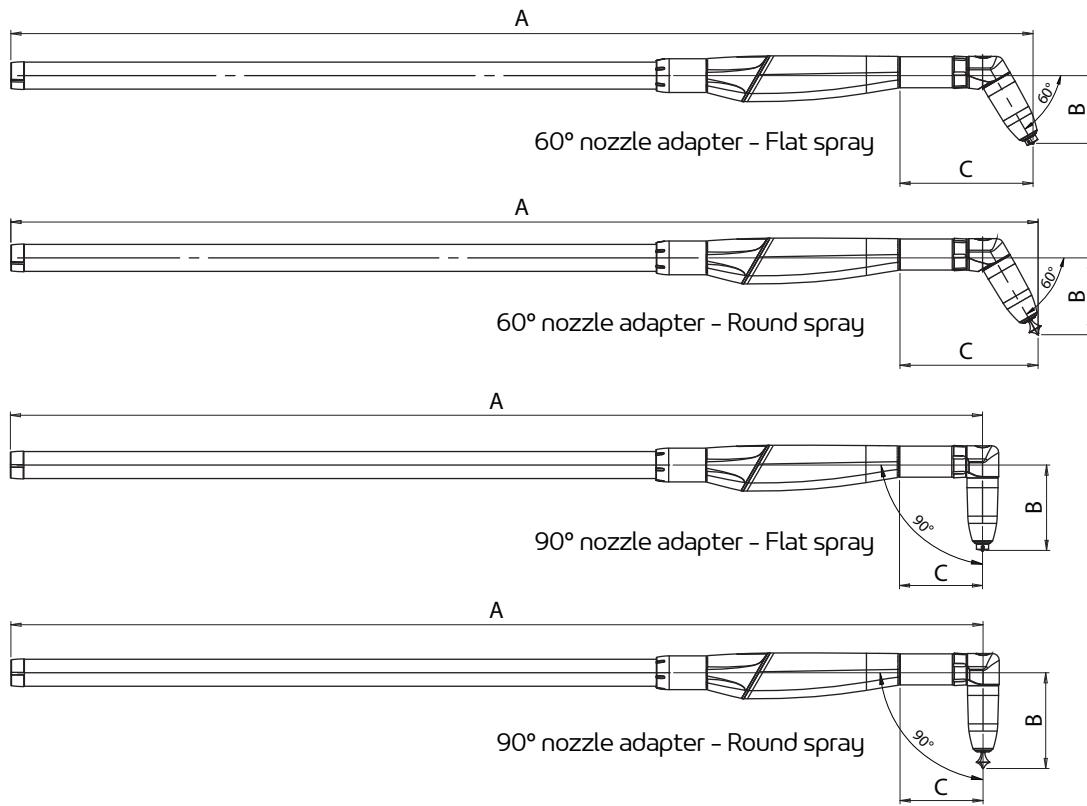

3.3. Dimensions (mm), optional extended nozzles

DES08420

Length of nozzles (mm)	150	300	450	600	1050

90° nozzle adapter - Flat spray	1441	127	123
60° nozzle adapter - Round spray	1522	114	205
90° nozzle adapter - Round spray	1441	142	123

3.5. General characteristics

Inogun A projector	
Ambient temperature during operations	0° to 40°C
Maximum output voltage	100 kV (0 kV, -10 kV)
Max. output current	110 µA (+ ou - 10 µA)
High voltage unit capacity	60 pF
Air pressure (electrode blowing)	< 1 bar
Projector weight (cable and plug included)	0.85 kg
Robotic version projector weight with a single support	1.19 kg
Robotic version projector weight with double convergent support	2.2 kg
Robotic version projector weight with double parallel support	2.16 kg
Maximum operating altitude	2000 m
Maximum relative humidity of 80% for temperatures up to 31°C, and linear decrease to 50% relative humidity at 40°C.	maximum 80% non-condensing
Storage / Transport	
Storage duration	Max. 2 years
Minimum/maximum storage temperature	-10°C + 45°C
Humidity	95% non-condensing
Min. pressure	750 mBar
Exposure to UV radiation	Stored away from light
Exposure to ionizing radiation	Not admitted

3.6. Air compressed quality

Maximum dew point at 6 bar (87 psi)	Class 4 i.e + 3°C (37°F)
Maximum particle-size of solid pollutants	Class 3 i.e 5 µm
Maximum oil concentration	Class 1 i.e 0,01 mg/m³ *
Maximum concentration of solid pollutants	Class 3 i.e 5 mg/m³ *

*: Values are given for a temperature of 20 °C (68 °F) at an atmospheric pressure of 1 013 mbar

Non-compliance with these characteristics may result in incorrect operation of the "Inocontroller or Inobox control modules."

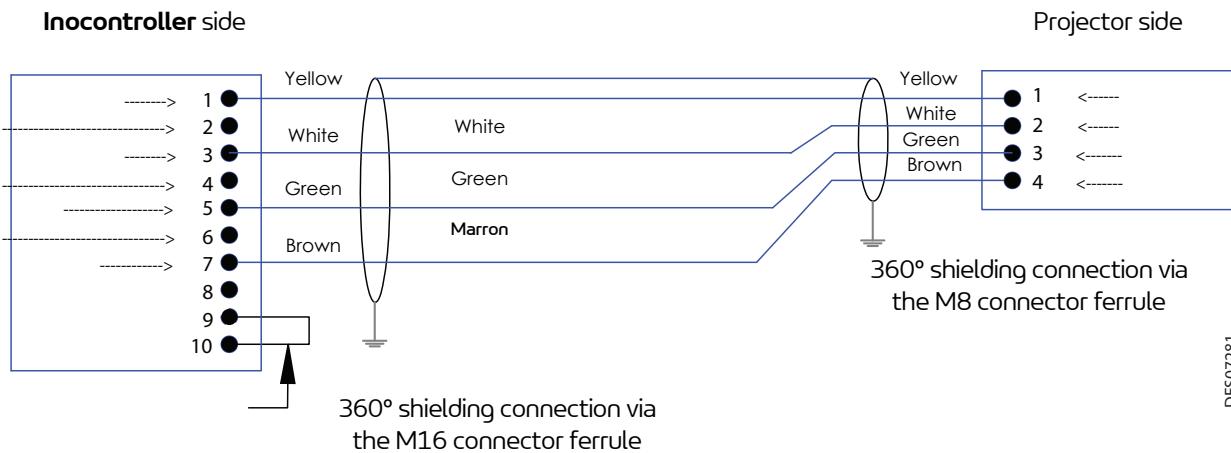

A 5 µm filter must be installed upstream of the compressed air supply of the Inocontroller or Inobox control modules. This filter is sized according to the size of the installation. Sames recommends using a filter of the type indicated in the section ([see § 8.13 page 75](#)). In the event of damage to the equipment due to the use of polluted air, the warranty may not be applied.

3.7. Operation

The **Inogun A** projector is connected to an **Inocontroller** ([see DRT7134](#)) or **Inobox** ([see DRT7145](#)) control module. This module provides the low voltage and high frequency power supply necessary for the operation of the high voltage unit integrated in the **Inogun A** projector and allows the powder supply to the projector.

4. Diagrams

5. Startup

5.1. Tools

P/N	Description	Qty	Unit of sale
H1GSYN037	Dielectric grease for high voltage unit (100 ml)	1	1

P/N	Description	Qty	Unit of sale
900019908	Split ring removal tool for 60° and 90° nozzle adapter	1	1

P/N	Description	Qty	Unit of sale
900018752	Inogun HV contact o-ring installation tool	1	1

P/N	Description	Qty	Unit of sale
900018753	Inogun air nipple seal assembly tool	1	1

Additional tools and accessories required:

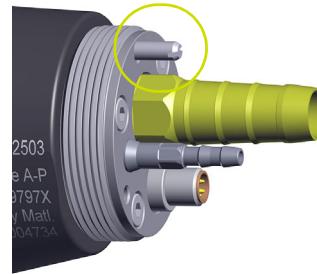

The tools listed below should be available for product installation and maintenance operations.

- Screwdriver(0,6x3,5).
- Phillips screwdriver (0x75).
- 5 mm hexagonal screwdriver.
- Allen wrench (3mm).
- Torque wrench.
- Open-end wrench (13 mm).
- Tube wrench (14 mm).
- Multigrip pliers.

5.2. Installation

5.2.1. Inogun A FCC FCC version

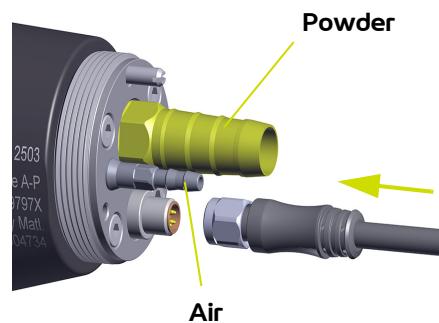

- Place the index pin on the holding flange.

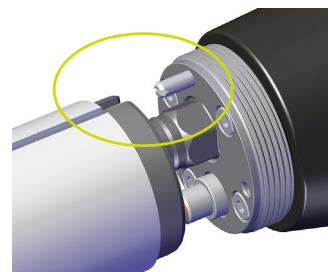

- Pass the LV cable through the support tube.

- Manually connect the LV cable and the air and powder hoses to the projector.

- Align the tube with the index pin.

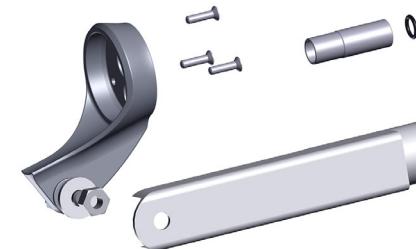

then tighten the nut.

5.2.2. Standard Inogun A version

Assembling

- Place the rear support on the holding flange.

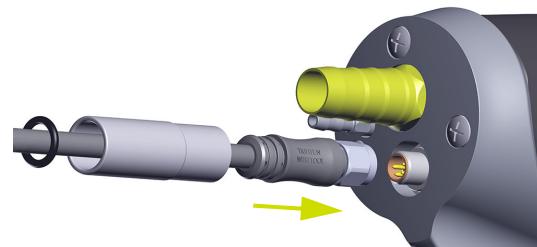

- Secure with the 3 screws M4 x16 (A).

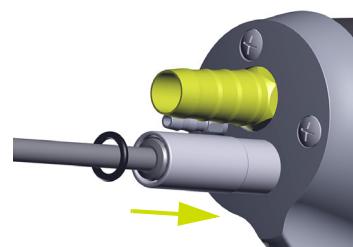

- Place the O-ring and sleeve on the LV cable.

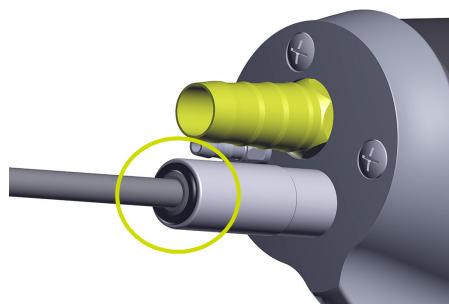

- Manually connect the cable to the projector.

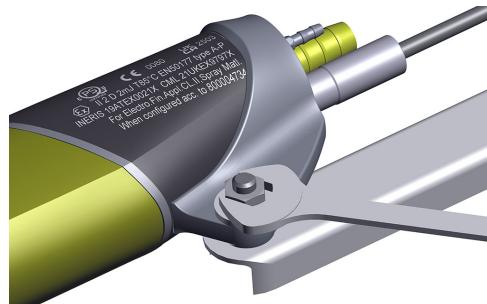

- Insert the sleeve into the rear support.

- Push the seal back into the groove of the connector to hold it in position.

- Screw the rear support onto the support tube using a 13 mm open-end wrench.
- Connect the air and powder hoses to the projector.

5.2.3. Installation of the counter electrode for the **standard Inogun A** version

- Remove the holding flange ([see § 6.4.2 page 35](#)).
- Separate the rear body from the projector to release the cap.

- Install the counter electrode connection instead. Push back the rear body thus equipped and replace the holding flange.

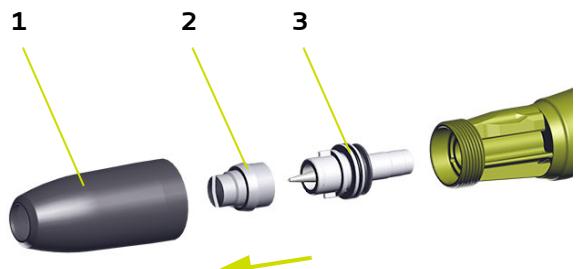

- Place the counter electrode on the projector equipped with the deflector and nozzle nut and connect it.

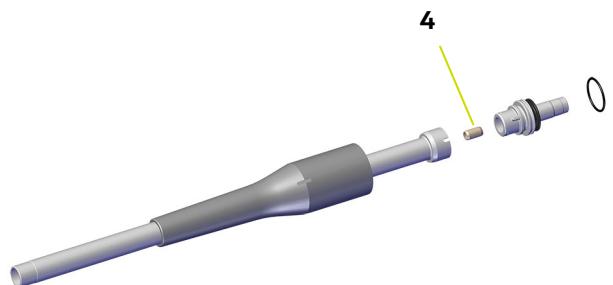

5.2.4. Installation of an extended nozzle (optional)

The **Inogun A** gun can be equipped with optional extended nozzles for flat spray and round spray ([see § 8.10.2 page 57](#) and [see § 8.10.4 page 67](#)).

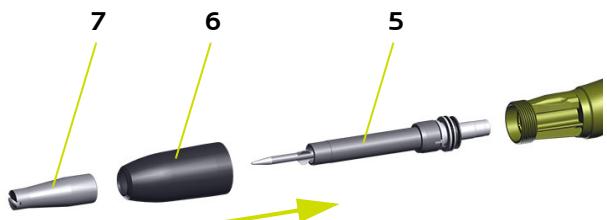

- Switch off high voltage,
- **Step 1:** Manually unscrew the nozzle nut (1).
- **Step 2:** Remove the electrode support assembly (3) and its deflector (2) flat spray or round spray.

When installing an extended nozzle from length 450 mm, it is imperative to check the installation of the reinforcing sleeve (4) (ref.: 900020899) on the reinforced electrode support ([see § 8.10.3 page 66](#)).

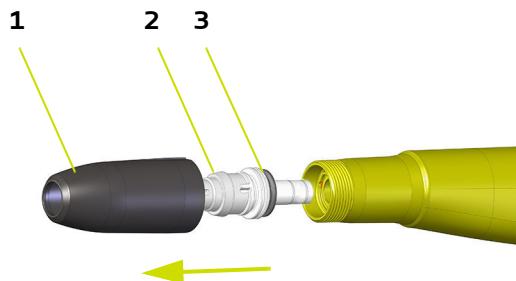

- **Step 3:** Install the extended nozzle assembly (5) into the projector barrel.
- **Step 4:** Screw on the new extended nozzle nut (6) by hand.
- **Step 5:** Install the deflector (7).
- Restart the high voltage supply.

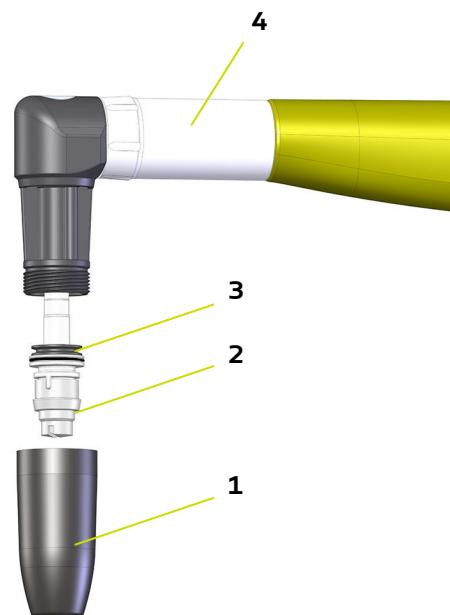

5.2.5. Installation of a 60° or 90° nozzle adapter

The **Inogun A** gun can be equipped with optional 60° and 90° nozzle adapters for flat spray and round spray (see § 8.12 page 73).

- Switch off high voltage,
- **Step 1:** Manually unscrew the nozzle nut (1).
- **Step 2:** Remove the electrode support assembly (3) and its deflector (2) flat spray or round spray.

- **Step 3:** Screw the nut(4) of the 60° or 90° nozzle adapter onto the barrel of the **Inogun A**.

- **Step 4:** Install the electrode support assembly (3) and its deflector (2) flat spray or round spray on the 60° or 90° nozzle adapter.
- **Step 5:** Screw the nozzle nut (1) onto the adapter by hand.
- Restart the high voltage supply.

5.2.6. Robotic versions

- Pass the low-voltage cable as well as the air and powder hoses through the sheath, then the coupling and the robotic support.
- Place the O-ring and sleeve on the LV cable. Manually connect the LV cable and then the air and powder hoses to the projector.
- Place the robotic support on the projector and secure with the 3 screws (F/90 HC M4 x 20).
- Screw the coupling onto the robotic support.
- Push the sheath into the fitting.

6. Maintenance

Preventive maintenance is an essential part of production and ensures the reliability of the installation. As a reminder, the performance of equipment can only be guaranteed if a minimum of control and cleaning operations are performed on this equipment.

Soiling and wear of the Inogun A projectors caused by the passage of powder depend on the operating and application conditions and the production rates

Switch off the power supply to the control module before connecting the spray gun. Before disconnecting the spray gun, switch off, disconnect the power supply to the Inocontroller or Inobox (otherwise, a malfunction may occur).

6.1. Summary table of maintenance operations

The maintenance intervals indicated in the procedures below are only indicative. The user will have to create his own maintenance schedule as he uses **Sames** equipment.

Procedure		Detail	Duration	Frequency
Cleaning				
A	A1	Cleaning of projector exterior	2 min	8 hours
	A2	Cleaning of electrode support and deflector	2 min	8 hours
Replacement				
Holding flange maintenance				
B	B1	Replacement of air nipple	2 min	-
	B2	Replacement of o-ring	2 min	-
Rear body maintenance				
C	C1	Replacement	5 min	-
	Gun assembly maintenance			
D	D1	Powder tube and penetrant testing version powder tube	2 min	-
	D2	Protective cover assembly	2 min	-
	D3	Replacement of HVU	5 min	-
Maintenance of 60° and 90° nozzle adapters				
E	E1	Replacement of o-rings and 60° and 90° elbows	5 min	-

6.2. Preventive maintenance plan – PMP 7133

[see § 10.1 page 78](#)

The objective of the proposed preventive maintenance plan is to define in an exhaustive way, the verification, replacement and cleaning actions of the installed **Sames** equipment.

In order to anticipate breakdowns and malfunctions that may be due to technical deviations of the installation, the preventive maintenance plan attached to the user manual lists the routine maintenance operations necessary for better comfort in the use of the production tool.

Depending on the skills, area of responsibility and accreditation of each person involved, the preventive maintenance plan can be divided into two distinct levels: level 1 and level 2:

- **Level 1:** first level maintenance is essentially composed of visual control and cleaning operations of some elements of the equipment. To limit this level, only the specific tools supplied with the equipment will be used. This first level of maintenance is generally taken care of by paint operators or installation managers.
- **Level 2:** second level maintenance completes the first level by more complex dismantling operations requiring electrical engineering tools.
This second level is generally handled by the factory maintenance department.

6.3. Cleaning

These maintenance operations can be performed online. Before any intervention, refer to the health and safety instructions ([see § 1.4 page 10](#)).

6.3.1. Procedure A1: Projector cleaning

Always wear safety glasses.

When handling powder, wear gloves of a suitable resistant material

Work in a well ventilated area.

All cleaning operations should only be carried out with compressed air expanded to a maximum pressure of 2.5 bar, a cloth or possibly a brush.
Never use water or solvents to clean the equipment.

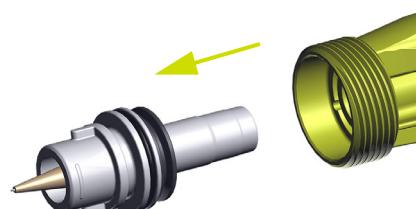

- Clean the projector with compressed air every 8 hours..

6.3.2. Procedure A2: Electrode support.

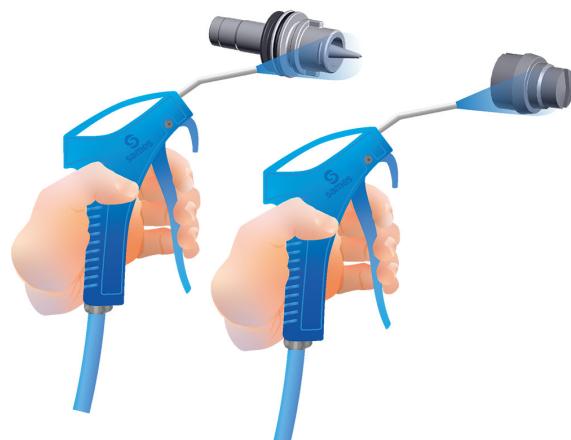

- Switch off high voltage,
- **Step 1:** Manually unscrew the nozzle nut then remove the deflector.

- **Step 2:** Remove the electrode support.

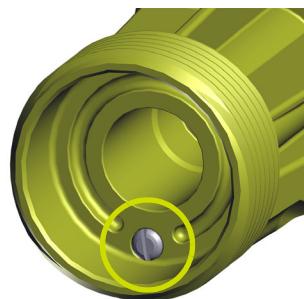

- **Step 3:** Clean the electrode support with compressed air and also the deflector.
Make sure that there is no accumulation of powder.

- **Step 4:** Clean the powder passage duct by blowing with compressed air.

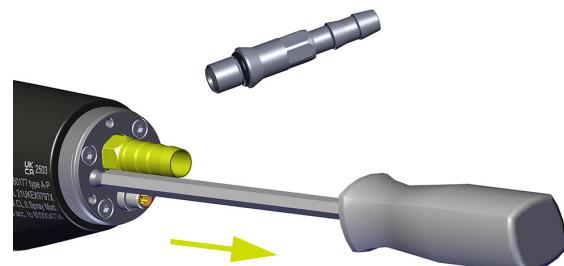

- **Step 5:** Before reassembling the electrode support, clean the electrical contact with compressed air located in the gun.
Check the condition of the O-rings, replace them if necessary.

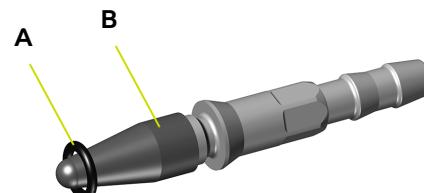

6.4. Replacement

6.4.1. Procedure B1: Replacement of air nipple

- **Step 1:** If the projector falls, check the condition of the air nipple:
- **Step 2:** Unscrew the air nipple with a 5 mm hexagon wrench. Replace if necessary.

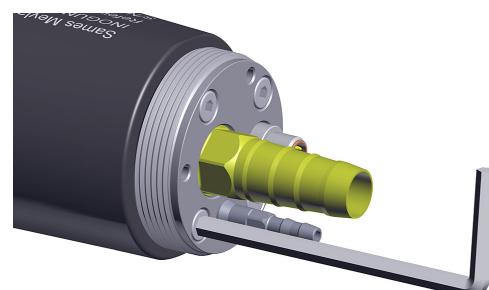

When replacing the O-ring (A), for reassembly, use the seal assembly tool (B) (P/N: 900018753).

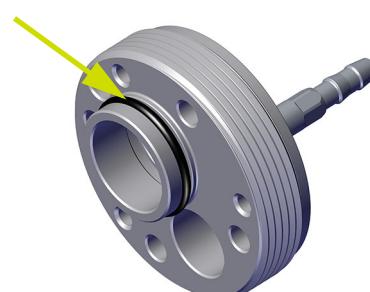

6.4.2. Procedure B2: Holding flange

- Unscrew the 4 M4x 20 screws with a 3 mm allen wrench and remove the holding flange from the rear body.

Check the condition of the O-Ring, replace it if necessary.

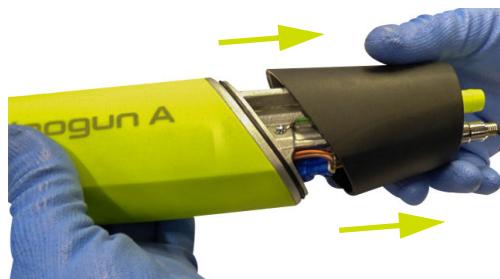

- For reassembly, tighten the screws crosswise and then tighten to 2,5 N.m.

6.4.3. Procedure C1: Rear body

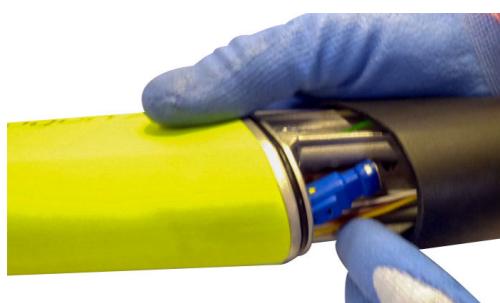

Removal:

- Gently fire to separate the rear body from the gun.
- Disengage the connector using a small screwdriver or 3 to press the tab.
- Loosen the ground screw.
- Check the general condition, wires, terminal and connector, replace the rear body if necessary.

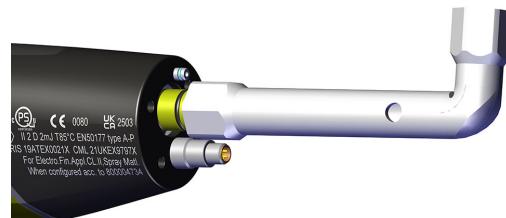

Installation:

- Replace the rear body, taking care not to pinch the wires.
Connect the ground wire, press the wire against the protective cover assembly..
- Connect the blue connector.
- Twist the blue connector 1/4 turn to position it longitudinally in the protective cover.
The wiring makes a "S".
- Then push the rear body against the gun.
- Using an ohmeter, test the continuity between the HV contact and the protective cover.

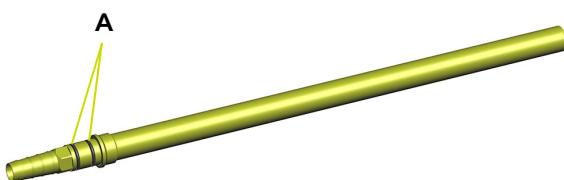

6.4.4. Procedure D1: Powder tube and penetrant testing version powder tube

- Start unscrewing the powder tube with a 14 mm pipe wrench, then continue manually.
- Extract the powder tube from the projector.
- Clean the inside of the powder tube with compressed air, possibly the outside.

- Check the condition of the O-rings (A) and powder tube, replace if necessary.

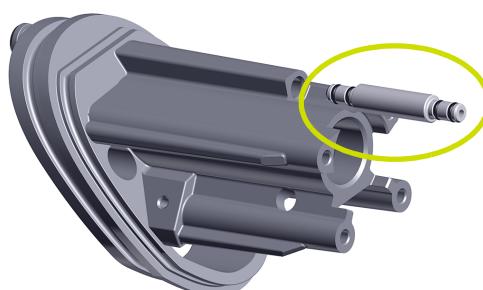

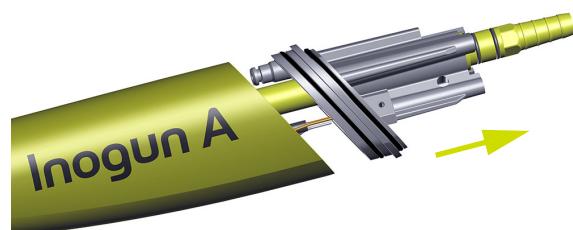

- Before reassembling the powder tube, blow its housing in the direction of rear body towards the outside of the projector.
- Insert the tube into the projector, it automatically positions itself and pushes it to the stop.
- Tighten manually and then continue tightening with the 14 mm pipe wrench.

6.4.5. Procedure D2: Protective cover assembly

Disassembly:

- Using a long cross-head screwdriver, loosen the 2 PT 40x 30 screws.
- Pull to remove the protective cover assembly.
- Check the condition of the O-rings, replace if necessary.
- Remove the electrode blowing duct, check its condition, replace if necessary.

Reassembly:

For the reassembly of the protective cover, it is imperative that the powder tube has been removed beforehand.

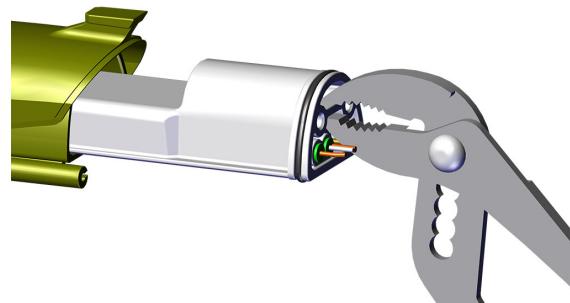

- Proceed in the reverse order: position the protective cover on the gun,
- Put the 2 PT 40x 30 screws in place and tighten to 75 cN.m.

6.4.6. Procedure D3: Replacement of HVU

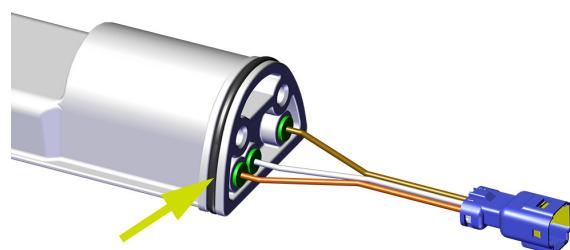

- Unscrew the HV contact.

- Using a multigrip pliers, extract the HVU from the gun.

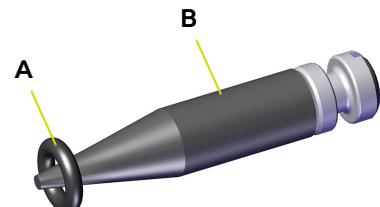

- Replace the HVU, apply a light coat of dielectric grease (P/N H1GSYN037) to the seal of the new HVU.
- Position the HVU in the barrel and push it to the stop.

- Check the condition of the contact o-ring. Replace it if necessary.

If replacing the O-ring (A), when reassembling, use the seal assembly tool (B) (P/N: 900018752).

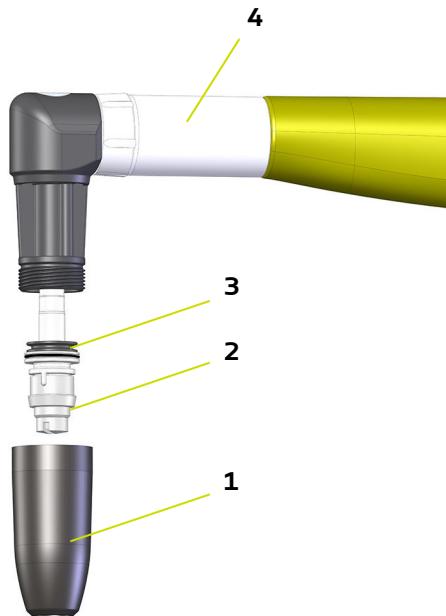

- Place a plug with a layer of dielectric grease on the HV contact seal.

Screw it to the contact + 1/4 turn. Make sure to leave a slight protrusion of the screw head in relation to the surface of the barrel.

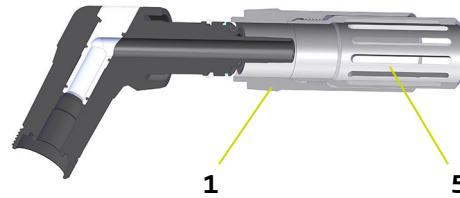

6.4.7. Procedure E1: Replacement of o-rings and 60° and 90° elbows

- Unscrew the nozzle nut (4) on the 60° or 90° nozzle adapter by hand.
- Remove the electrode support assembly (2) and its deflector (3) flat spray or round spray from the 60° or 90° nozzle adapter.
- Unscrew the swivel nozzle nut (1) and remove the nozzle adapter from the barrel.

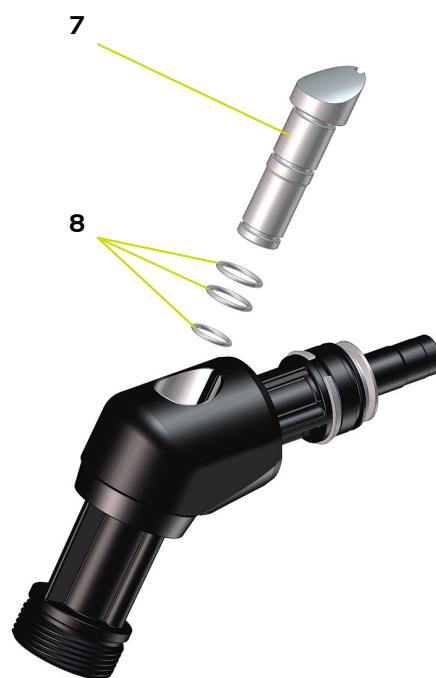

- Insert the split ring removal tool (5) (P/N: 900019908) into the swivel nozzle nut (1) and push down to compress the split ring. Release the swivel nozzle nut.

- It is essential to replace the o-ring (6) with a new one.

- Remove the 60° or 90° elbow (7) by pushing it out from under it using a non-cutting tool so as not to damage the elbow.
Replace it if necessary.
- It is essential to replace the 3 o-rings (8) with new ones.
- Proceed in reverse order for reassembly.

7. Troubleshootings

Symptoms	Probable causes	Remedies
The powder does not come out	Incorrect installation	Check that the spray gun installation and connections comply with the instructions (see § 1.4 page 10).
	The projector is incorrectly set	Follow the instructions for making adjustments.
	Insufficient air flow rate supplied by the compressed air circuit.	Check the circuit.
	The powder-carrying hose is obstructed	Clean the powder-carrying hose using compressed air.
	The 60° or 90° powder elbow is plugged	Clean the swivel powder elbow with compressed air.
Powder does not adhere to the part to be painted	The part is not correctly grounded.	Ensure that the electrical resistance of the parts in relation to the ground system is less than $1M\Omega$.
	The electrode is covered in hardened paint or soiling.	Switch off the high-voltage power supply, then clean the electrode and ensure that the current delivered is less than 30 μA for flat spray nozzles.
	The voltage is not sufficiently high.	Increase the voltage, but ensure that the current does not exceed 30 μA for flat spray nozzles.
Abnormally high current consumption	Ground wire too close to the projector electrode.	Move the ground wire further away.

8. Spare parts list

The spare parts are classified in 2 different types:

- **1st emergency parts:**

The 1st emergency parts are strategic components which are not necessarily consumables but which in case of failure prohibit the operation of the equipment.

Depending on the production line's commitment and the production rates imposed, the first emergency parts are not necessarily kept available in the customer's stock.

Indeed, if an interruption of the production flow is possible, storage is not necessary.

On the other hand, if the stop is not possible, the 1st emergency parts will be kept in stock.

- **Wearing parts:**

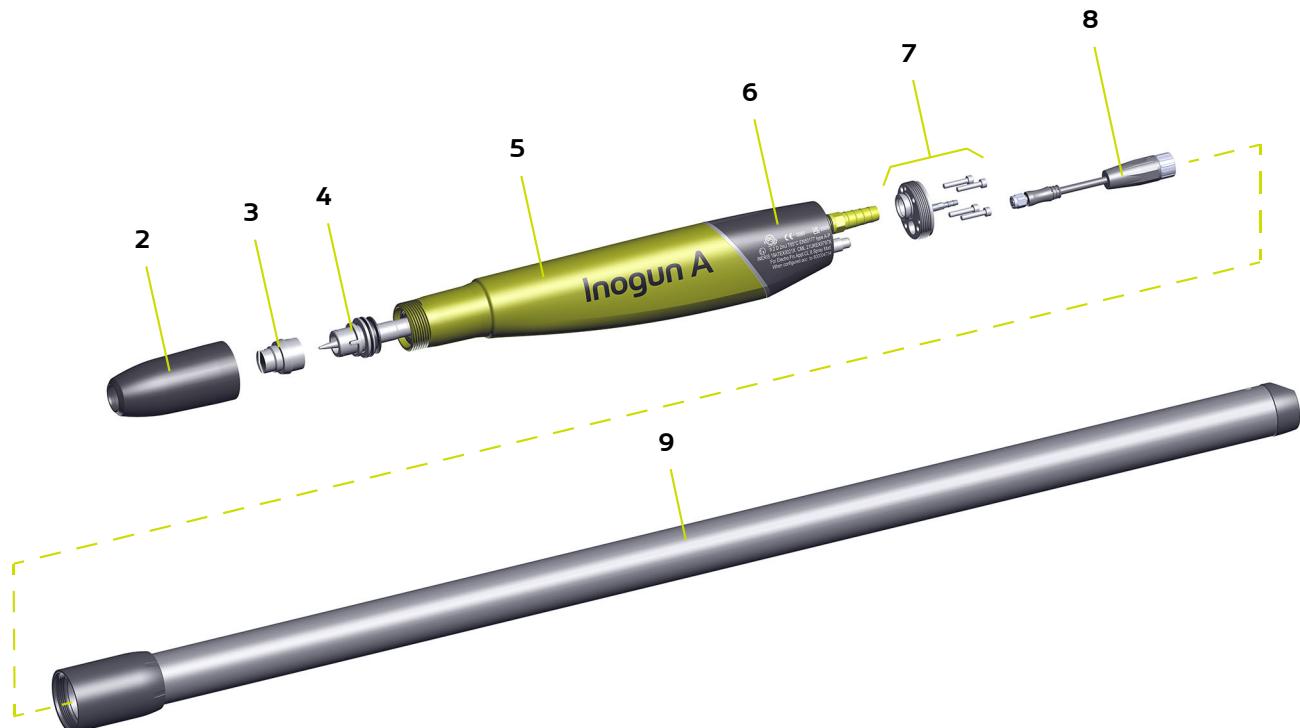

Wearing parts are consumable components such as O-rings that undergo regular degradation over time during normal operation of the installation. It is therefore advisable to replace them according to a defined frequency and adapted to the operating time of the installation.

The wearing parts must therefore be kept in the customer's stock.

To guarantee an optimal assembly, spare parts must be stored in a temperature close to their temperature of use. Should the opposite occur, a sufficient waiting time must be observed before the installation, so that all the elements are assembled in the same temperature.

10.2. EU and UK declarations of conformity

UE DECLARATION OF CONFORMITY

- (1) The manufacturer herewith declares that the equipment is in conformity with the relevant Union harmonization legislation.

(2) Equipment type	PULVERISATEUR ELECTROSTATIQUE DE PEINTURE POUDRE / ELECTROSTATIC POWDER PAINT SPRAY SYSTEM Inogun A avec/with Inocontroller ou/or Inobox		
	(4) Markings		
(3) Applicable Directives	2014/34/UE ATEX Directive	Sprayer Inogun A : II 2 D 2 mJ	Control module Inocontroller : II (2) D [2 mJ] Matériel associé Inocontroller doit être installé en zone sûre (zone non dangereuse) Associated equipment Inocontroller must be installed in safe zone (non explosive area)
		Control module Inobox : II 3 (2) D [2 mJ] Matériel associé Inobox peut être installé en zone 22 Associated equipment Inobox can be installed in zone 22	
		(5) Harmonised standards	EN 50177 : 2009 / A1 : 2013 EN 50050-2 : 2013
		(6) Conformity assessment procedures	UE type examination certificate : INERIS 19ATEX0021X
			Notified Body : INERIS 0080 60550 Verneuil-en-Halatte France
		Le signe X placé derrière le numéro d'attestation d'examen UE de type indique que cet appareil est soumis à des conditions spéciales d'utilisation: cet appareil est prévu pour une gamme de températures ambiantes de 0°C à 40°C. Lors de l'installation, l'utilisateur devra tenir compte du fait que le clavier du module de commande Inobox n'a subi qu'un choc mécanique faible (groupe II suivant EN 60079-0). Le module de commande Inobox doit être protégé de la lumière. The X sign placed after the EU type examination certificate number indicates that this equipment is intended for an ambient temperature range of 0°C to 40°C. During the installation, the user will take into consideration that the keypad underwent only a shock corresponding to an energy of a low risk (Group II according to EN 60079-0), and must be protected against the high mechanical hazard risk. The Inobox has to be protected from light.	
	2014/30/UE Electromagnetic Compatibility Directive	(5) Harmonised standards	Inocontroller + Inogun A : EN 61000-6-4 : 2007 /A1 : 2011 EN 61000-6-2 : 2005
	2014/35/UE Low Voltage Directive	(5) Harmonised standards	EN 61010-1 : 2011

(7) This declaration of conformity is issued under the sole responsibility of the manufacturer.
