DECLARATION OF INCORPORATION
OF PARTLY COMPLETED MACHINERY
EU DECLARATION OF CONFORMITY

(1) The manufacturer herewith declares that the equipment is in conformity with the relevant Union harmonization legislation.

(2) Equipment type	FLOWMAX AIRLESS PUMP 40F100		
(3) Applicable Directives	2006/42/CE	(4) The relevant technical documentation was compiled as specified in annex VII, part B.	
		The essential health and safety requirements mentioned in the Directive 2006/42/CE on Machinery have been applied. Articles: 1.1 , 1.1.2 ,1.1.3, 1.1.5 , 1.2 , 1.2.2, 1.2.3, 1.2.4, 1.2.4.1 , 1.2.4.3 , 1.2.6, 1.3 ,1.3.1, 1.3.2, 1.3.3, 1.3.4, 1.3.6, 1.3.7, 1.3.9, 1.4,1.4.1,1.4.2, 1.4.2.1, 1.5, 1.5.2, 1.5.3, 1.5.4, 1.5.5, 1.5.6, 1.5.7, 1.5.8, 1.6, 1.6.1 , 1.6.2, 1.6.3, 1.6.4, 1.7, 1.7.1, 1.7.2	
	(5) That partly completed machinery is also in conformity with the provisions of		
	2014/34/UE	(6) Marking	FLOWMAX AIRLESS PUMP 40F100 ⊕ II 2G Ex h IIB T5 Gb X FLOWMAX AIRLESS PUMPS RANGE ⊕ II 2G Ex h IIB T1-T6 Gb X Ex h => Protection par sécurité de construction (c) / Protection by constructional safety (c) Conditions spéciales d'utilisation, le signe X indique de se référer aux prescriptions figurant dans le manuel d'instructions qui accompagnent le produit. - Specific conditions of use, X indicates to refer to the prescriptions specified in the instructions manual that accompanies the product.
		(7) Harmonised standards	EN ISO 80079-36 : 2016 EN ISO 80079-37 : 2016 EN 1127-1 : 2019
		(8) Conformity assessment procedure	Module A Technical documentation (Annex VIII)
(9) Notified body	INERIS 0080 – 60550 Verneuil-en-Halatte – France – INERIS-EQEN		
(10) This partly completed machinery must not be put into service until the final machinery in which it is to be incorporated has been declared in conformity with Directive 2006/42/CE on Machinery. Sames is allowed to compile the technical documentation. Sames undertakes to transmit, in response to a reasoned request by the national authorities, relevant information on the partly completed machinery in the most appropriate form. This declaration of incorporation of partly completed machinery and this declaration of conformity are issued under the sole responsibility of the manufacturer.

INSTALLATION AND SAFETY INSTRUCTIONS

TRANSLATION FROM THE ORIGINAL MANUAL

IMPORTANT : Before assembly and start-up, please read and clearly understand all the documents relating to this equipment (professional use only).

THE PICTURES AND DRAWINGS ARE NON CONTRACTUAL. WE RESERVE THE RIGHT TO MAKE CHANGES WITHOUT PRIOR NOTICE.

SAMES KREMLIN SAS
13, chemin de Malacher
38 240 - MEYLAN - France
☎ : 33 (0)4 76 41 60 60

www.sames-kremlin.com

1. SAFETY INSTRUCTIONS

GENERAL SAFETY INSTRUCTIONS

CAUTION : The equipment can be dangerous if you do not follow our instructions concerning installation and servicing described in this manual and in accordance with applicable European standards and local national safety regulations.

Please carefully read all the instruction literature before operating your equipment.

Only trained operators can use the equipment.

The foreman must ensure that the operator has understood the safety instructions for this equipment as well as the instructions in the manuals for the different parts and accessories.

Read carefully all instruction manuals, label markings before operating the equipment.

Incorrect use may result in injury. This equipment is for professional use only. It must be used only for what it has been designed for. Never modify the equipment. The parts and accessories supplied must be regularly inspected. Defective or worn parts must be replaced.

Guards (motor cover, coupling shields, connectors,...) have been designed for a safe use of the equipment.
The manufacturer will not be held responsible for bodily injury or failure and / or property damage due to destruction, the overshadowing or the partial or total removal of the guards.

Never exceed the equipment components' maximum working pressure.

Comply with regulations concerning safety, fire risks, electrical regulations in force in the country of final destination of the material. Use only products or solvent compatible with the parts in contact with the material (refer to data sheet of the material manufacturer).

PICTOGRAMS

N	P	R	S	T	U
ELECTRICAL HAZARD	WARNING FIRE HAZARDS	EXPLOSION HAZARDS	GROUNDING	WARNING (USER)	WARNING SERIOUS INJURIES

PRESSURE HAZARDS

Current legislation requires that an **air relief** valve be fitted in the air supply circuit to the air motor to prevent over pressurisation. This safety feature, ensures that it is not possible to supply the air motor with excessive air pressure that may cause injury.

Please ensure that a **material drain valve** is fitted in the fluid circuit to drain and depressurise the circuit. Once depressurised and drained, work /servicing may then commence on the equipment. Please remember to close these valves when restarting the system.

HIGH PRESSURE INJECTION HAZARDS

When working with high pressure equipment, special care is required. Fluid leaks can occur. There is a risk of material being injected to any exposed parts of body, this could cause severe injury :

- medical care must be sought immediately if paint is injected under the skin or in other parts of the body (eyes, fingers).
- never point the spray gun at any one. Never try to stop the spray with your hands or fingers nor with rags or similars.
- **follow the shut down procedure and always depressurize air and fluid circuits** before carrying out any servicing on the gun (cleaning, checking, maintenance of the material or cleaning of the gun nozzles).
- for the guns equipped with a safety device, always lock the trigger when not in use.

FIRE - EXPLOSION - SPARKS - STATIC ELECTRICITY HAZARDS

A poor earth connection, inadequate ventilation, sparks or static electricity can cause an explosion or fire. to avoid these risks when using or servicing SAMES KREMLIN equipment, the following safety procedures must be followed :

- ensure a good earth connection and ground the parts to be handled i.e. solvents, materials, components and equipment,
- ensure adequate ventilation,
- keep working area clean and free from waste solvents, chemicals, or solid waste i.e. rags, paper and empty chemicals drums,
- never use electrical switches / power if in an atmosphere of volatile solvent vapour,
- stop working immediately in case of electrical arcs,
- never store chemicals and solvents in the working area.
- use paint whose flash point is the highest possible to prevent from any formation of gas and inflammable vapours (refer to materials' safety instructions),
- install a cover on the drums to reduce the diffusion of gas and vapours in the spraybooth.

TOXIC PRODUCT HAZARDS

Toxic products or vapours can cause severe injury not only though contact with the body, but also if the products are ingested or inhaled. It is imperative :

- to know the material products and their risks,
- notified or hazardous materials must be stored in accordance with the regulations,
- the material must be stored in an appropriate container, never place materials in a container where there is a risk of spillage or leakage,
- a procedure must be applied for the safe disposal of waste material. It must comply with all prevailing regulations and legislations of the country where the equipment is to be used,
- protective clothing should always be worn in compliance with the material manufacturers' recommendations,
- depending on the application and chemical safety instructions, safety glasses, hearing protective earplug, gloves, foot wear, protective masks and possible breathing equipment should be worn to comply with the regulations (Refer to chapter "Safety equipment of SAMES KREMLIN selection guide).

CAUTION!

It is forbidden to use material containing high concentrations of halogenated hydrocarbon solvents with **aluminium** or **zinc fillers**. Non-compliance with the instructions may cause explosion risk causing serious or fatal injury.

EQUIPMENT REQUIREMENTS

Guards (motor cover, coupling shields, connectors,...) have been designed for a safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or property damage due to destruction, the overshadowing or the partial or total removal of the guards.

PUMP

Before carrying out any work, it is imperative to read and clearly understand the disassembly and reassembly instructions before servicing. The operator must understand the equipment and the safety instructions. These instructions are available in the equipment manuals.

The air motor is designed to be mounted with a pump. Never modify any components or couplings. When operating, please keep hands away from moving parts. Before starting up the equipment, please read the PRESSURE RELIEF instructions. Please ensure that any relief or drain valves fitted are in good working order.

HOSES

- Keep hoses out of circulation areas, moving parts or hot surfaces,
- Never expose product hoses to temperature higher than + 60°C / 140° F or lower than 0°C / 32° F,
- Never pull or use the hoses to move the equipment,
- Tighten all fittings as well as the hoses before operating the equipment,
- Check the hoses regularly; change them if they are damaged,
- Never exceed the maximum working pressure (MWP) indicated on the hose.

USED PRODUCTS

Considering the wide variety of products that are available and can be used in our equipment it is impossible to check and make recommendations for all chemical data, regarding the risks of possible chemical attack and their long term chemical reaction

SAMES KREMLIN can not be held liable for :

- compatibility of wetted parts,
- risks to staff and the surroundings,
- for worn or defective parts, for faulty equipment or units, or the quality of final product.

It is the responsibility of the user to know and prevent any possible risks such as toxic vapours, fires or explosions. He shall determine the risks of immediate reactions or pursuant to repeated exposures of the staff,

SAMES KREMLIN shall not be liable for physical injuries, direct or indirect material damages caused by the use of chemicals.

2. HANDLING

 **Check the weight and the dimensions of the equipment**
(☞ refer to 'Technical features' section of the instruction manual)

If weight and dimensions are too important, the unloading must be carried out by means of a forklift or any other appropriate means with a qualified personnel and in a clear horizontal area to prevent from risks of damage injury or an accident.

The centre of gravity is not in the centre of the machine : carry out by hand a stability-test after having lifted the whole at 10 cm / 3.937" maximum.

After the unloading, the handling of the whole (eg: elevator pump) is carried out by means of a pallet truck taking the bottom part of the frame.

Remark : Each pump motor is fitted with a ring. The ring is designed for the hoisting of one pump and can not be used for the handling of the complete assembly.

3. STORING

Storing before installation :

- Storing ambient temperature : 0 / +50 °C / 0 / +122°F
- Protect the whole against dust, water trickling, dampness and shocks.

Storing after installation :

- Operating temperature : +15 / +35 °C / +59 / +138.2° F
- Protect the whole against dust, water tricking, dampness and shocks.

4. INSTALLATION OF THE EQUIPMENT

The machine is installed on a stable horizontal floor (for eg a concrete flag).

The machine shall be made stable by the use of holding down bolts or by the use of other anchoring methods, strong enough to prevent unintended bodily movement of the equipment.

To avoid risks caused by static electricity, the equipment as well as its components must be grounded.

- **For the pumping equipments** (pumps, pneumatic rams, frame...), a section wire of 2.5 mm² is fixed on the material. Use this wire to connect the material to "the general ground". In case of severe environments (mechanical protection of the wire of earthing insufficient, vibrations, mobile material...) where function damages at the ground are probable, the user have to replace the provided wire of 2.5 mm² by a device more adapted to its environment (wire with a more important section, bonding strip, fixing by thimble with eyelet...).

The continuity of the ground must be controlled by a qualified electrician. If the continuity of the ground is not ensured, check the terminal, the wire and the earthing point. **Never** use the material without have solved this problem.

- In the severe cases of environments (mechanical protection of the wire of earthing insufficient, vibrations, mobile material...) where damages of the function put at the ground are probable, the user will have to replace the wire of 2.5 mm² provided, by a device more adapted to its environment (wire of more important section, bonding strip, fixing by thimble with eyelet...),
- **The gun** must be 'grounded' via a material hose or an air hose. In case of spraying by means of a gun with cup, the air hose must be conductive,
- **The materials to be painted** must also be grounded.

All the materials situated in the working area shall be grounded.

- **Never store** more than necessary inflammable materials inside the working area,
- The materials must be stored into **approved drums** and grounded,
- Use only grounded **metals containers** for the use of cleaning solvents,
- **Cardboard and paper are prohibited.**

5. MARKING OF THE EQUIPMENT

Each equipment has a label plate with the name of the manufacturer, the equipment part number, the interesting informations to use correctly the equipment (pressure, voltage,...) and sometimes the above pictogram.

The equipment is designed with and consists of high quality materials and components which can be re-used.

The 2012/19/UE European Directive covers all equipments with a crossed-out bin pictogram. Please inform yourself about the collection systems for electric and electronic equipments.

Please act in accordance with local rules and **do not dispose of old equipment with household wastes**. A correct disposal of old equipment will help prevent negative consequences for the environment and health.

AIRLESS PUMP

40F100

Disassembly / Reassembly

TRANSLATION FROM THE ORIGINAL MANUAL

IMPORTANT : Before assembly and start-up, please read and clearly understand all the documents relating to the equipment (professional use only).

THE PICTURES AND DRAWINGS ARE NOT CONTRACTUAL. WE RESERVE THE RIGHT TO MAKE CHANGES WITHOUT PRIOR NOTICE.

SAMES KREMLIN SAS
13, chemin de Malacher
38 240 - MEYLAN - France
 : 33 (0)4 76 41 60 60
www.sames-kremlin.com

CAUTION :

Before any action on the pump, shut off the compressed air supply and depressurize the system.

The pump is manufactured under the ATEX agreement and can not be modified. SAMES KREMLIN will not be held responsible for any failure to comply with that instruction.

DISASSEMBLY / REASSEMBLY OF THE FLUID SECTION

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards

Unscrew fitting (38) and screws (41 and 43) to remove attachment fluid tube (39).

▪ **SUCTION VALVE (DOC. 573.114.050)**

Unscrew suction valve (35) by holding cylinder (27).

The ball (22) is secured on the valve (35) by means of a circlips (21).

Clean the parts.

Reinstall suction valve (35) and seal (23). Replace them if necessary.

▪ **EXHAUST VALVE AND MOBILE PACKING**

Unscrew cylinder (27) and pull it downwards.

Unscrew exhaust valve (34) by holding piston (24).

Remove ball (32) and mobile packing (GT seal - ind. 31).

Clean the parts and reinstall them. Replace seals if necessary.

▪ **UPPER TIGHTNESS SEAL**

Unscrew the four screws (30).

Remove tightness seal (28) by pulling discharge flange (25) downward.

Replace tightness seal (28), O-Rings (29 and 11).

Reinstall the parts in the reverse order of the disassembly sequence.

DISASSEMBLY / REASSEMBLY OF THE COUPLING (WITH BELLOWS)

**Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.
The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards**

Disassemble the fluid section prior to carrying out the following procedure.

▪ BELLOWS

Unscrew nuts (14) from the tie-rods.

Remove suction flange (1) and cylinder (2) by pulling them downwards.

Remove screws to disconnect suction bearing (3) from air motor.

Disconnect intermediate piston (9) from air motor rod.

Remove coupling parts.

Remove bellows flange (4) by unscrewing screws (13) to free the upper part of the bellows.

Unscrew skirt (8) to free the lower part of the bellows.

Replace bellows (5).

When installing bellows, push it into skirt firmly (8).

Insert intermediate piston (9) into bellows (5) and screw the skirt at the piston end.

Insert bellows and piston (9) into the suction bearing (3).

Install flange (4) in the suction bearing and tighten the whole with screw (13).

Connect bellows-piston set to motor rod and secure the whole on the lower support of the air motor by using screws (12).

Reinstall fluid section piston (24) on intermediate piston (9).

Replace seals (11). Then install cylinder (2) and suction flange (1).

Install the whole on tie-rods and tighten it with nuts (14).

AIR MOTOR

**Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.
The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards**

▪ REVERSING BLOCK (MOTOR) (DOC.573.046.050)

Disassemble cover (32) by removing screws (33).

Dissociate female yoke (12) from the reversing block lever (9).

Dismount reversing-block by removing the screws (10 and 8).

Reinstall the new reversing-block in the reversing order of the disassembly sequence.

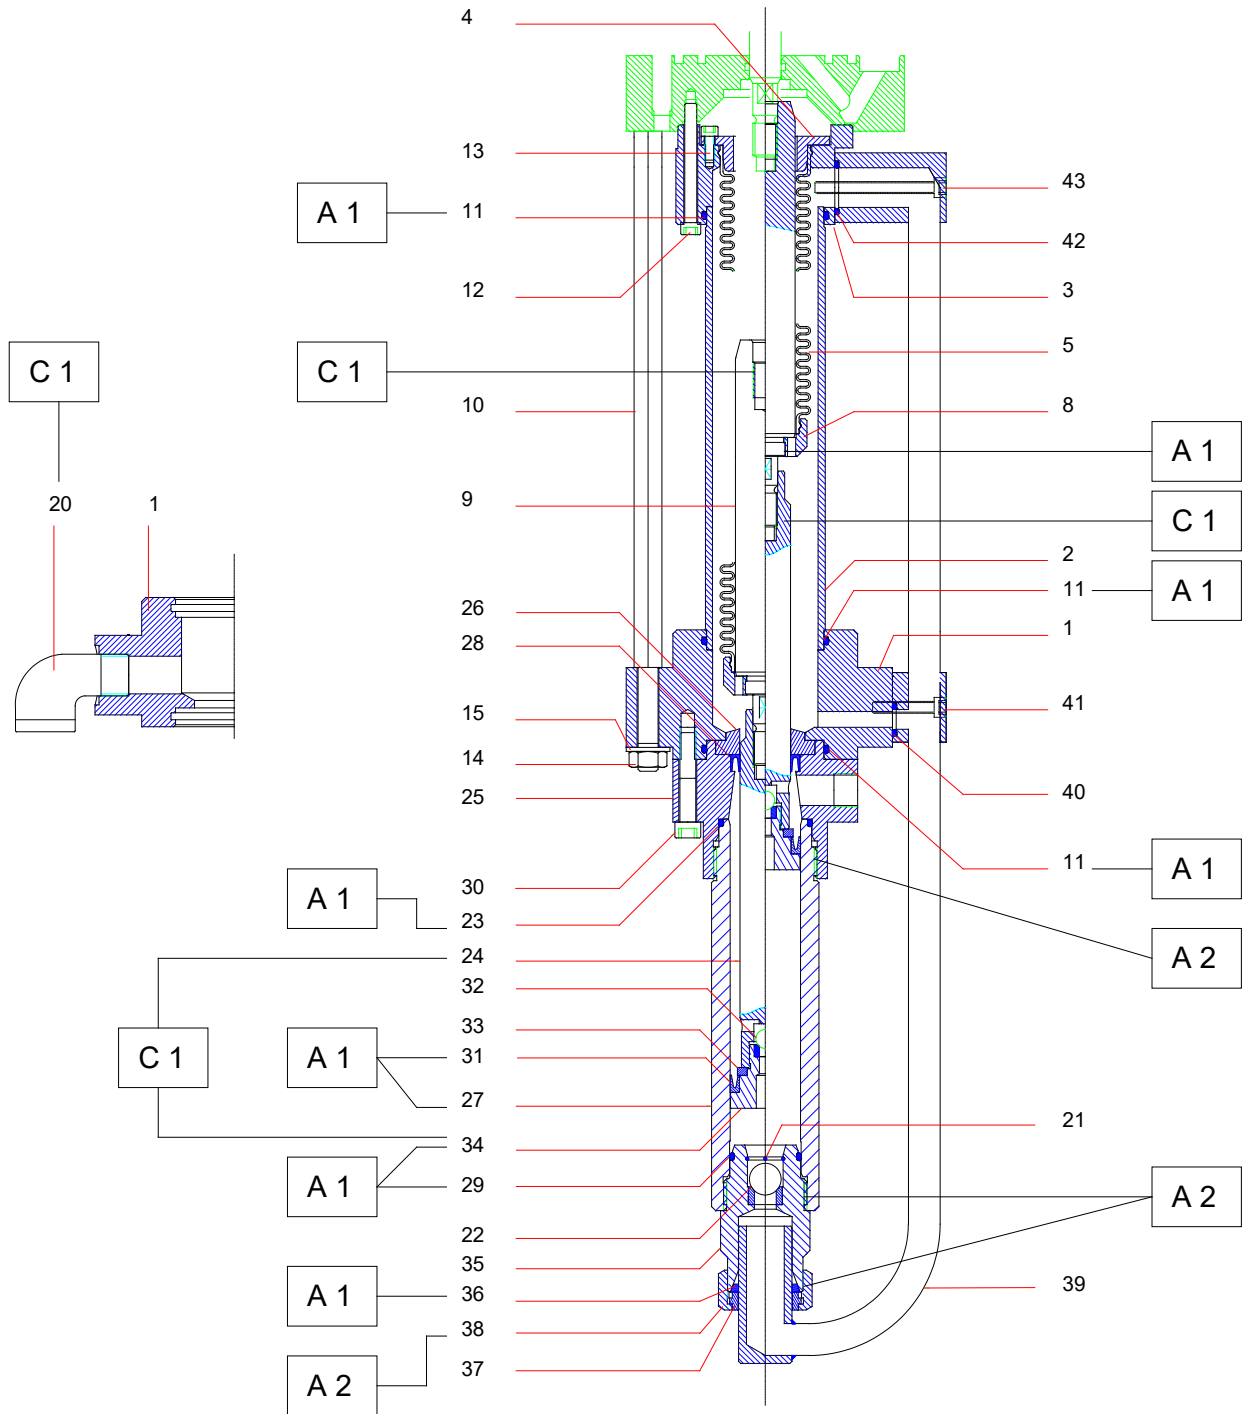

- ➡ **CAUTION** : The number of spirals must equally be distributed on each fastening parts in order to get the above dimension.

Before reassembling the different components :

- Clean the parts with the appropriate cleaning solvent.
- Install new seals if it is necessary, after having lubricated them with PTFE grease.
- Lubricate the piston and the inside of the cylinder to prevent from damaging the seals.
- Install new parts if it is necessary.

P1 = 6 bar max. / 87 psi

P2 = 1 → 5,5 bar / 14.5 → 80 psi
 (air de puissance / power air / Arbeitsluft / aire de potencia)

P3 = 4 bar max. / 58 psi max.
 (air de pilotage / pilot air / Steuerluft / aire de pilotaje)

Le régulateur (29) est pré réglé en usine pour délivrer une pression de 4 bar max.

The regulator (29) is preset in the factory to give a maximum pressure of 4 bar / 58 psi.

Der Druckregler (29) ist werksseitig auf einen maximalen Steuerluftdruck von 4 bar eingestellt.

El regulador (29) se regula en la fábrica para aportar una presión máxima de 4 bar.

AIRLESS PUMP

PREVENTIVE MAINTENANCE

TRANSLATION FROM THE ORIGINAL MANUAL

IMPORTANT : Before assembly and start-up, please read and clearly understand all the documents relating to this equipment (professional use only).

THE PICTURES AND DRAWINGS ARE NON CONTRACTUAL. WE RESERVE THE RIGHT TO MAKE CHANGES WITHOUT PRIOR NOTICE.

SAMES KREMLIN SAS
13, chemin de Malacher
38 240 - MEYLAN - France
☎ : 33 (0)4 76 41 60 60

www.sames-kremlin.com

▪ PUMP

Make sure that the pump is clean and in good condition to increase equipment working life.

If the pump is a intensive™ one :

- Make sure the pump fluid outlet flange is always filled up with T lubricant (this T lubricant will normally be coloured by the paint).

- Regularly clean the wetting-cup with solvent after having drained the lubricant (Unscrew the plug placed at the upper flange).

Guards (motor cover, coupling shields, connectors,...) have been designed for a safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or property damage due to destruction, the overshadowing or the partial or total removal of the guards.

Make sure that the suction strainer is clean and in good condition. Clean it regularly and replace it if it is necessary.

Flush the pump as often as necessary, specially when spraying pigment filled-material.

Whatever the case, when stopping the pump, always leave it filled with material :
For a short duration shutdown, if the flushing has not been carried out, leave the pump filled with material.
For a long duration shutdown, after flushing, leave it filled with solvent.

▪ SPRAY GUN

Comply with the usual instructions of spray gun servicing (refer to spray gun manual).

▪ FILTER

If the pump is equipped with a filter at the fluid outlet, comply with the usual instructions of filter servicing (refer to filter manual).

HIGH PRESSURE PUMP FOR AIRMIX® AND AIRLESS SPRAYING TROUBLESHOOTING

TRANSLATION FROM THE ORIGINAL MANUAL

IMPORTANT : Before assembly and start-up, please read and clearly understand all the documents relating to this equipment (professional use only).

THE PICTURES AND DRAWINGS ARE NON CONTRACTUAL. WE RESERVE THE RIGHT TO MAKE CHANGES WITHOUT PRIOR NOTICE.

SAMES KREMLIN SAS

☎ : 33 (0)4 76 41 60 60

www.sames-kremlin.com

CAUSE	SOLUTION
The pump does not start.	Check the pump air supply.
Priming trouble : → Air is always coming out from the spray gun. → Air (or material) does not come out from the spray gun.	Be sure that the spray gun is fully opened and air evacuated through this one. Air intake at the fitting or at the suction rod. Check the pump valves. If a valve is stucked by dry paint, it can be unsticked without disassembling it. Blow air pressure directly by suction fitting.
The pump does not stop at once when shutting off the spray gun : → The pump stops only on down stroke. → The pump stops only on up stroke.	Check exhaust valve or valve seal. Check suction valve or upper cartridge.
The pump does not reverse.	Check spring of the air motor reversing-block. Lubricate reversing-block with HP 150 oil. Check if there is pilot air (depending on air motor model).
On intensive™ pump, the lubricant into the cup is fastly coloured.	Check the upper packing (tighten the cup or change seals if it is necessary).
On FLOWMAX® pump, leakage of fluid at the bottom of the air motor.	Check bellow.
Spraying trouble.	Refer to spray gun manual.
Decrease of material flow.	Refer to filter instruction manual.

**HIGH PRESSURE PUMP
FOR AIRMIX® AND AIRLESS SPRAYING**

***OPERATING PRINCIPLE
AND START-UP***

TRANSLATION FROM THE ORIGINAL MANUAL

IMPORTANT : Before assembly and start-up, please read and clearly understand all the documents relating to this equipment (professional use only).

THE PICTURES AND DRAWINGS ARE NON CONTRACTUAL. WE RESERVE THE RIGHT TO MAKE CHANGES WITHOUT PRIOR NOTICE.

SAMES KREMLIN SAS
13, chemin de Malacher
38 240 - MEYLAN - France
☎ : 33 (0)4 76 41 60 60

www.sames-kremlin.com

1. OPERATING PRINCIPLE

The pump (A) consists of :

- an alternating air motor (B).
- an hydraulic section(C) mechanically coupled to the air motor (B).

The air motor is supplied with compressed air by means of the regulator knob (D) (pantone 382 colour knob). The pressure is read on the gauge (E).

During its alternating movement, the air motor drives the piston of the hydraulic section (C). The fluid is drawn in (L) and forced under pressure in (N). Due to its design, the pressure is always the one read on the gauge (E) x the pump ratio.

⇒ To adjust the fluid flow rate, turn the regulator knob (D) (pantone 382 colour knob) (Gauge E).

The pumps are intensive™ ones or FLOWMAX ® ones (with bellow).

2. START UP

Protective clothing (gloves, protective masks, glasses, hearing protective earplug, protective clothing) should be worn to comply with the recommendations.

The working area must be correctly ventilated.

2-1 PUMP SUPPLIED IN SUCTION

STANDARD INTENSIVE™
PUMP

FLOWMAX® AIRLESS
PUMP

Captions :

A	Intensive™ or FLOWMAX ® pump (B + C)	L	Suction rod (depending on version)
B	Air motor	M	Accumulator filter (depending on version)
C	Fluid section	N	Air shut off valve (depending on version)
D	'MOTOR AIR' air regulator	O	Air shut off rod (depending on version)
E	Gauge	P	HP Fluid hose
H	Air inlet valve	Q	Gun
I	Ground	R	T lubricant (125 ml / 4.4 oz) (only for intensive™ pump)
J	Relief valve	S	Wetting-cup (only for intensive™ pump)

(For specific installation, please contact your SAMES KREMLIN representative).

Nota : If the pump is equipped with an accumulator filter (M), the filter is supplied with a screen n° 12 (filtration size : 280 µ or 55 mesh). The screen is recommended for the use of an AIRLESS gun fitted with a nozzle model 20. If the fluid spraying is carried out by means of an other nozzle, please choose an other screen (refer to filter instruction manual). Adjust the screen to the application.

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards

Start up procedure :

- 1 - Ground the pump.
- 2 - **If the pump is a intensive™ one, fill up the wetting-cup (S) with "T" lubricant (R) or with an appropriate solvent.**
- 3 - Unscrew the air regulator (D).
- 4 - Interconnect the equipment with the air pressure network (clean air - P < 6 bar / 87 psi). Install a water drop, model 3/4" if it is necessary.
- 5 - Connect all the hoses , compressed air general supply hose and fluid hose (P), as well as the gun (Q).
Nota : Comply with the diameters of hoses recommended in the specifications of the pump.
- 6 - Remove the nozzle from the gun.

■ **FLUSHING WITH SOLVENT**

- 7 - Immerse suction rod (L) and air shut off rod (O) into the material container.
- 8 - Open air shut off valve (N).
- 9 - Open the valve (H) of the pump air equipment to supply the air motor.
Nota : If the air motor is a 5000 or a 8000 version, it needs pilot air to operate. The pump air equipment supplies pilot air to the air motor. The air supply pressure is adjusted previously in the factory to 4 bar / 58 psi maximum.
- 10 - Increase the air regulator (D) so that the pump runs slowly (Pressure between 0.5 and 1 bar / 7.25 to 14.503 psi).
- 11 - Observe the drain (O); air bubbles come out from it. When bubbles no longer come out from it, shut off the drain valve (N).

▪ **PRIMING WITH MATERIAL**

- 12 - Remove suction rod (L) and drain rod (O) from material container and immerse them in a solvent filled container.
- 13 - Open drain valve (N), wait until the material flows out regularly, then shut off the drain valve (N).
- 14 - Point the spray gun towards the material container and trigger the gun until the material flows out regularly.

▪ **WORK**

- 12 - Remove suction rod (L) and drain rod (O) from material container and immerse them in a solvent filled container.
- 13 - Open drain valve (N), wait until the material flows out regularly, then shut off the drain valve (N).
- 14 - Point the spray gun towards the material container and trigger the gun until the material flows out regularly.

Nota : Some of these pumps are designed for AIRMIX ® spraying when using long hoses and medium or high viscosity fluids.

For this use, a spraying air kit shall be mounted on the pump air supply in order to feed compressed air to the spray gun.

2-2 PUMP SUPPLIED IN FILLING (CIRCULATING)

Interconnect the fluid inlet of the pump with the circulating supply hose and start up the pump as it is specified previously.

If the pump is a FLOWMAX ® one :

WARNING:

- **Fluid section filling pressure :** 2 bar maximum / 29 psi maximum
- **WARNING : Do not create overpressure.**
- **Never use** the pump when **an isolating gate on the supply circuit** (upstream from the FLOWMAX ® fluid section) is shut : **it would damage the bellows.**
- **Do not install** a material regulator on the supply circuit or any arrangement that could perform as **a non-return valve.**

3. SHUTDOWN AT THE END OF THE WORK

▪ SHORT DURATION SHUTDOWN

- 1 - Decrease the material pressure of air regulator (D) until reading **0 bar / 0 psi** on gauge (E).
- 2 - Trigger the gun to depressurize the system.
- 3 - Remove the nozzle of the spray gun and soak it into solvent.

▪ LONG DURATION SHUTDOWN

- 1 - Decrease the material pressure of air regulator (D) until reading **1 bar / 14.503 psi** on gauge (E).
- 2 - Remove the nozzle from the spray gun and soak it into solvent.
- 3 - Open the drain valve. The pump must operate at low speed. If the speed is too high, decrease the pump air pressure (D).
- 4 - Remove the suction rod and the drain rod from the material container and immerse it in a solvent-filled container. Take all the appropriate precautions in the presence of flammable solvents.
- 5 - When the solvent flows out clear and clean, close the drain valve.
- 6 - Point the spray gun towards the material container and press the gun trigger. When the solvent flows out, point the gun towards the recovery container.
- 7 - When the solvent flows out regularly, release the spray gun trigger.
Nota : If the pump is a intensive™ one, release the spray gun trigger when the pump piston is in a low position. To prevent from damaging the seals when starting once again the pump, the piston must be immersed into solvent.
- 8 - Fully unscrew the air regulator (D) and shut off the main compressed air valve (valve H).
- 9 - Trigger the spray gun trigger to decompress the hoses. Therefore, the pump and the hose remain filled with solvent at the atmospheric pressure.

4. SAFETY DEVICE

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.
The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards

A relief-valve (setting : 6.5 bar / 94 psi) is fitted on the pump air motor - thus protecting this one from an overpressure which could damage it.

AIRLESS PUMP

40F100

38 240 - MEYLAN - France

☎ : 33 (0)4 76 41 60 60

www.sames-kremlin.com

1. DESCRIPTION

- Air operated piston pump (stainless steel) - with a bellows seal fluid packing
- Low maintenance and ease of use. Use without lubrication

Recommended for :

- Supplying one or several spray guns
- Water-based or solvent-based paints whose viscosity is lower than 1 000 mPa/s

2. TECHNICAL FEATURES

Motor type2000-4
 Pump body typeFLOWMAX F100
 Theoretical pressure ratio40/1

Wetted parts :

Hard chrome stainless steel,
 Stainless steel, Carbide.

Tightness packings :

Bellows : Polyethylene
 Upper, fixed : GT (polyethylene)
 Lower, mobile : GT (polyethylene)

Air motor stroke	100 mm	4"
Air motor section	200 cm ²	31 sq.in
Hydraulic section	5 cm ²	0.8 sq.in
Delivery per cycle	100 cc	3.5 oz
Number of cycle	10 per liter	38 per gal
Fluid delivery (30 cycles).	3 l	0.8 USgal
Maximum air operating pressure	6 bar	88 psi
Maximum discharge pressure	240 bar	3 480 psi
Weighted sound pressure (LAeq)	81.1 dBa*	81.1 dBa*
Maximum operating temperature	50° C	122° F
Weight	27 kg	59.5 Lbs

* Test conditions - Noise level :

- Test duration : 30 s,
- Motor air pressure : 6 bar,
- Material used : water,
- Flow rate : Pump adjusted at 20 cycles/minute

▪ FITTINGS

		Bare pump	Pump assembly
Air	Inlet	F 3/8 BSP	F 3/4 BSP (air supply)
Fluid	Inlet	F 1/2 BSP	Male 26 x 125 + suction rod (fitting F 26 x 125)
	Outlet	F 3/8 NPS	Male 1/2 JIC / # 5 JIC (Filter outlet)

▪ HOSES WITH FITTINGS

Pump air supply hose (minimum ID for a 5 m / 16.5 ft length) : \varnothing 16 mm / 5/8"
 AIRLESS fluid hose (between pump fluid outlet and spray gun) : \varnothing 6.35 mm int. / 1/4"

▪ DIMENSIONS

Ind.	mm	"	Ind	mm	"	Ind	mm	"	Ind	mm	"

M	Ø 9	Ø 0.35									

3. INSTALLATION

The pumps are designed to be installed in a spray booth.

DESCRIPTION OF THE LABEL MARKING

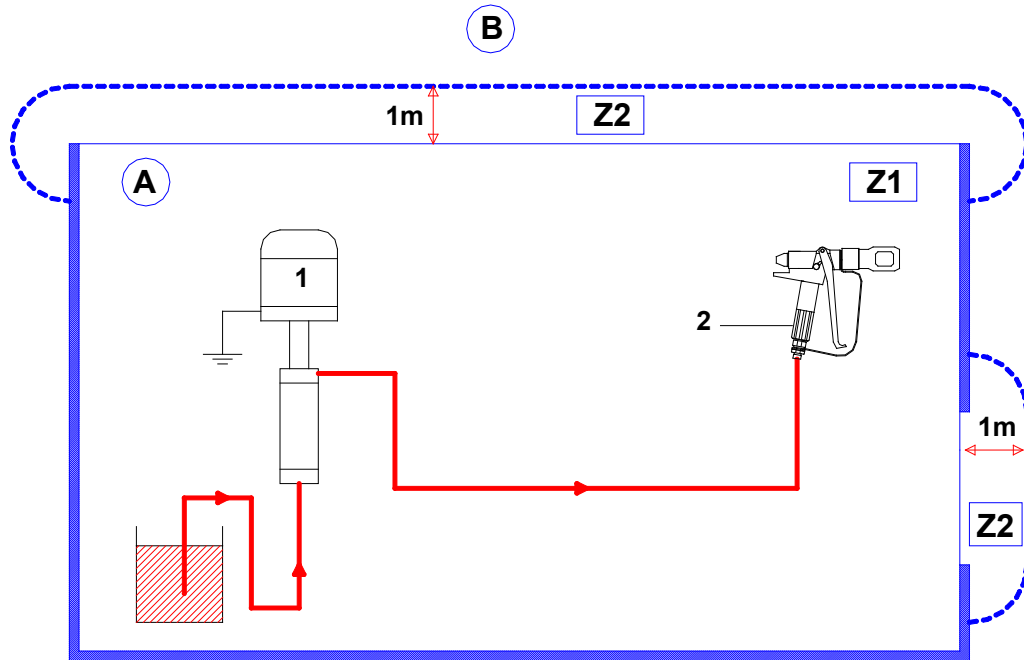

Description	
Sames	Manufacturer's brand
STAINS FRANCE	Manufacturer's address
Ex II 2 G	<p>Ex : Use in explosive area</p> <p>II: Group II 2: Category 2</p> <p>Surface equipment intended for use in environment where explosive atmospheres due to gases, vapors, mists are likely to occur occasionally during normal operation.</p> <p>G: Gas</p>
Ex h IIB T1-T6	<p>Ex: Marking of conformity to European standards</p> <p>h: Protection mode for non-electrical devices</p> <p>IIB: Reference gas for equipment qualification</p> <p>T1-T6: Temperature class range</p>
Gb	Gb : Equipment protection level (gas Zone 1)
X	X : Special conditions apply to the use of the safe operation. Refer to the instructions in the instruction manuals that accompany this product.
UKCA	UK CA : UK Conformity Assessment Marking required for certain products placed on the market in Great Britain (England, Wales, Scotland) on January 2021
CE	CE : European conformity
TYPE	Pump model
P prod : xx bar / xx psi	Maximum fluid pressure at the pump outlet
P air : 6 bar / 87 psi	Maximum air supply pressure of the pump motor
SERIE / SERIAL	Number given by Sames . The two first numbers indicate the manufacturing year.

TEMPERATURE CLASS - PUMP, MODEL 40F100

Temperature class	Maximum surface temperature
T5	100° C / 212°F

■ INSTALLATION INSTRUCTIONS

Ind.	Description
A	Explosive area area 1 (Z1) or area 2 (Z2) : spray booth
B	Non explosive area

Ind.	Description
1	Pump
2	Spray gun

The 1 m / 39.37" distance indicated in this diagram is given for information purposes only and hold harmless to Sames.

The exact delimitation of the zones is the express responsibility of the user, depending on the materials used, the environment and the conditions of use.

The 1 m / 39.37" distance can be modified if the analysis conducted by the user requires it.

NB: Choose the appropriate pump to ensure that the working pressure supplied is suitable for the selected gun.
