Editor's note

To help you increase your competitiveness, **Sames** dedicates itself daily to excellence in terms of innovation, reliability and sustainability.

We are constantly improving our performances as well as quality to meet your specific needs.

We also help you define the equipment allowing your installation to comply with V.O.C. directives and industry standards.

We enable you to benefit from reliable technologies while ensuring you a swift return on investment.

In this catalogue, you will find the equipment that will enable you to reach the paint application results you are targeting and the finish quality you desire.

Our mission is to provide you with the best equipment to meet your needs and requirements.

The entire team at **Sames** is at your disposal to answer your questions.

Enjoy your reading.

A strong identity at your disposal

Since joining the **EXEL Industries group**, **Sames** has taken on the challenges of the 21st century. Increasing our customers' comfort and profitability, giving them a superior service: this is not enough anymore. **Sames** thrives to be one of the best contributors in **Corporate Social Responsibility** (CSR).

This challenge has many aspects. On the human side, we continue respecting our customers, employees and shareholders through our commitment to safety, our **"Human Touch"** policy and uncompromising ethics. On **the environment side**, we pledge to keep our processes sustainable, our carbon footprint minimal, and make products long lasting, easy to repair and recycle.

Our challenges do not stop there. It is our duty to help our customers achieve these goals, belonging to all of us. We must also reduce our packaging, recycle our waste, reduce our transportations costs...

Let us face reality: the industry of paints, glues, varnishes, solvents, etc. has scope to improve its environmental footprint. Our commitment to our customers and to the planet Earth, is to help reduce the waste of products, support the reduction of Volatile Organic Compounds (VOC) and fluorine compounds (PFAS), reduce the energy consumption, reduce the amount of unused and discarded chemical products.

More than a supplier, **Sames** is the partner of your performance.

We Simply apply the most efficient solutions.

Improve your business

Leader in finishing solutions to protect and embellish materials, **Sames** is your key partner to enhance your productivity, combined with an excellent finish quality.

OUR DOMAINS OF EXPERTISE

On top of world-class products, Sames offers to the professionals a complete range of services, based on hundreds of years of cumulated experience:

> HOTLINE

Experienced technicians with direct access to the full pool of technical competences answer you in English and French languages. Available at office hours, Central European Time.

+33 (0)1 49 40 25 28

Monday to Friday: 8:30 - 12:00 am and 13:00 - 17:30 pm

> AUDIT

We are specialists in spray painting. Our application specialists visit your premises and produce a written audit of recommendations, covering:

- Safe use of our products
- Work procedures
- Quality and efficiency assessment
- Fine tuning

Customers putting those recommendations in practice usually experience huge gains in final product quality and savings in product and energy.

> PREVENTIVE AND CORRECTIVE MAINTENANCE

May be carried out on site or in our repair center of Stains (Paris), France. Includes preventative maintenance, repairs, upgrades and overhauls.

> GENUINE SPARE PARTS

Sames original parts and kits guarantee quality and reliability for long periods of time. Using genuine spare parts improve the lifetime of the equipment and are a critical condition for maintaining ATEX certification on the user's premises.

> TECHNICAL SKILLS DEVELOPMENT

Can be carried out on your workplace or in our training center of Stains (Paris), France. Basic training encompasses the usage and maintenance of our equipment. Advanced trainings help even experienced painters to improve their skills in the fine art of spray paint. Investing in workers' trainings and competences is the best method to improve product quality, reduce downtime and waste, save product and time.

The trainings offered by Sames are registered by the French government and eligible to tax rebates.

Quality assurance

In accordance with the requirements of the ISO 9001 standard, issue 2015, procedures and records are totally controlled. Sames quality policy's commitment guarantees the utmost quality at each stage of manufacturing and component assembly.

Our products are in the scope of the following European directives:

- 2014/34/UE Explosive Atmospheres
- 2006/42/CE Machinery
- 2014/35/UE Low Voltage
- 2014/30/UE Electromagnetic Compatibility
- 2011/65/UE RoHS Restriction of Hazardous Substances in electrical and electronic equipment
- 2012/19/UE WEEE Waste of Electrical and Electronic Equipment
- 1907/2006/CE REACH Registration, Evaluation, Authorization and Restriction of Chemicals.

A process mapping allows organizing all the stages while being very attentive to the various environments (customers, competition...), to the audits (inner and outer) and to the indicators linked to the defined aims.

Airmix® spray technology

Sames Kremlin created the Airmix® Technology in 1975.

Airmix® is an intermediate spray technology that combines the advantages of both conventional and Airless technology.

Airmix® systems are the best choice where speed of application and high finish quality are both necessary. Applications include spraying on furniture, machinery, transports, shipbuilding, and many other markets.

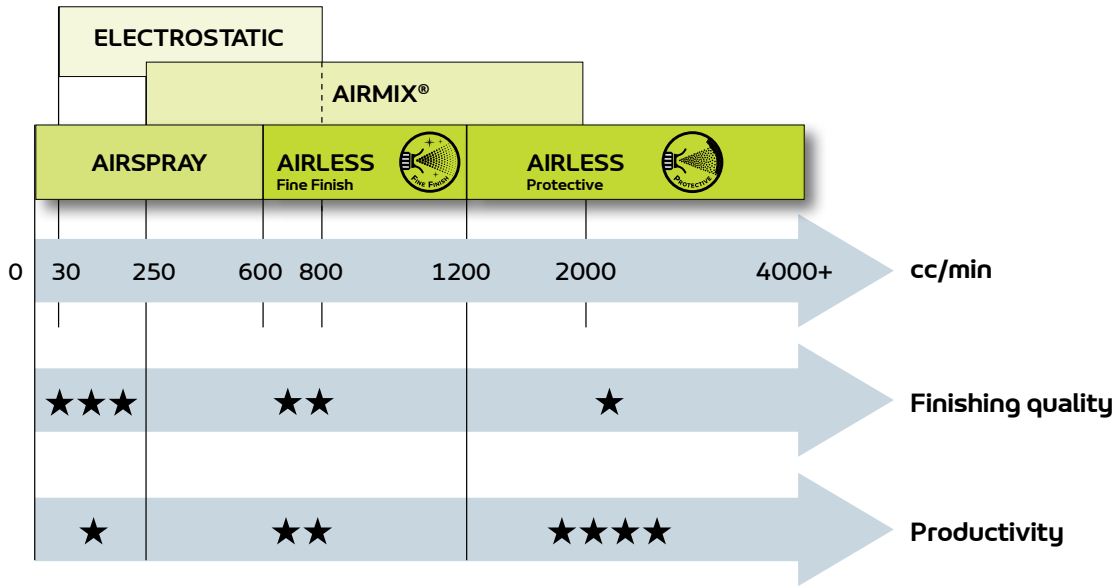
The Airmix® range is designed for manual, automatic and electrostatic spraying.

WWW

Airmix® is particularly well suited to apply the following materials:

- Water based paints
- Solvent based paints
- Epoxy primer
- PU Top coat
- Polyester
- Acrylics
- Cellulose
- 2K material with acid or moisture sensitive catalyst
- High gloss
- High Solid Content

The place of the Airmix® technoogy inside coating technologies:

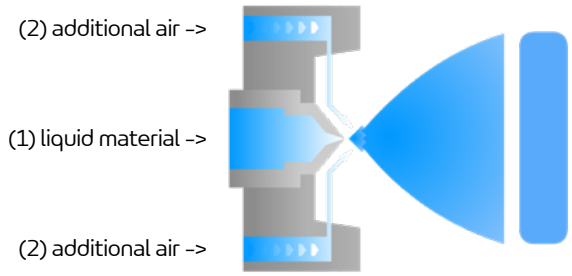


Recommended range of use

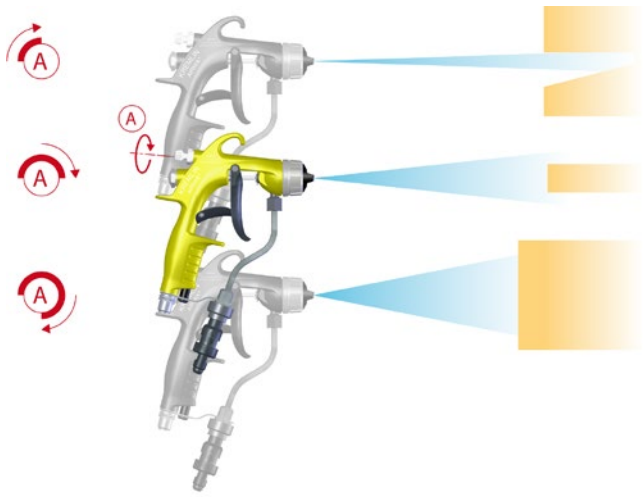
Airmix® spray technology

How does it work

As in **airless** technology, the liquid material is forced at medium pressure through a very small hole in a carbide tip. The material **(1)** vaporizes and forms small droplets. Air jets push the stream of product forward and help the atomization; therefore, paint can be vaporized at a much lower pressure than in airless systems.
This increases the transfer efficiency, improves the quality of atomization, and prevents the formation of drops on the head.



Other air jets **(2)** called «fan control» concentrate the width of the spray, according to the application requirements. The pressure of fan control air jets is controlled by the «fan control knob» at the rear of the gun **(A)**.



Without fan control air, the width angle of the spray is the maximum defined by the **tip** specifications. Increasing the air pressure will concentrate the beam by up to 1/3, this being heavily influenced by the characteristics of the product, viscosity and pressure.

Airmix® key points

Airmix® gives a high finishing quality and uniform film build for high productivity on paint flow rates up to 2000 cc/min. Conventional spray is known for high finishing quality with limited flow rate, ideally under 400cc/min ; Airless is an efficient high flow solution but lacking somehow in quality finishing.

The use of Airmix® systems is optimal in a range of pressure between 30 and 240 bar for paint; this corresponds to pumps with a pressure ratio between 5/1 and 40/1.

The **Sames** Airmix® spray gun delivers a transfer efficiency (the amount of product effectively reaching the target) up to 86%, according to the EN13966 standard. Eliminating overspray reduces coating consumption by up to 35 % against airspray application while maintaining an outstanding spraying quality.

AIRMIX®
HALF A CENTURY OF SUCCESS !

Airmix® spray technology

Equipment

Xcite®+ and Xcite®+ light are our flagship in manual spray guns. In 2022, they have replaced the legacy Xcite® and Xcite® light, offering better atomization performances and improved features.
Xcite®+ includes a stainless steel filter and swivel; Xcite®+ light is lighter in hand and its operation might require a product in-line filter.
AVX automatic gun is to be integrated in a robot, machinery or paint tunnel. Instead of a manual trigger, the gun is operated by an external air trigger.

Heads and tips

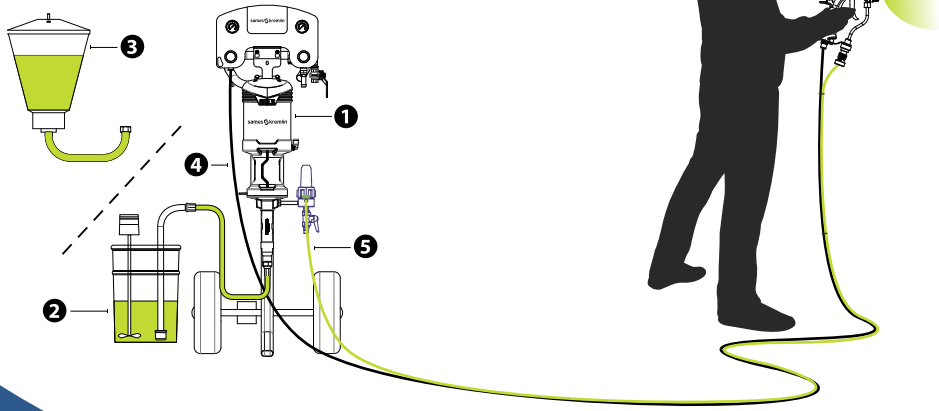
A large range of tips are available for any application on ***page 21***; Tips are common to Xcite®+, Xcite®+ light and AVX, whereas AVX special heads offer a large range of options.

Spray systems

Airmix® spray systems can be ordered as complete spray pack as described on the following page or assembled component by component.
A basic Airmix® system includes a pump, a gun, an air hose and a product hose.
The pump **(1)** can be supplied from a suction rod **(2)** or a gravity hopper **(3)**.
The gun shall be selected as 120bar, 240 bar or even 400 bar for extremely thick materials.

Air **(4)** and product **(5)** hoses must be selected according to the material sprayed and the maximum pressure that the pump can deliver.

Spray systems may also include standalone filters, in-line-filters, agitators, carts, flushing rods, two-gun management, circulations systems.
Do not hesitate to contact your nearest **Sames** representative for advice in defining the right combination for your needs.



Spray kit selection

The choice of pump and gun type depend mostly on the type and viscosity of the product to be applied.
This can be found in the material data sheet.

Our standard kits include
2 air regulators with gauges,
2 hoses 7.5m long (except on 151.665.700 and 151.665.720) with protecting sleeve, and one Xcite®+ spray gun with VX24 head.

They satisfy the requirements of applications spraying up to 5 liters /day.
Kits are sent ready to assemble.

Manual spray guns

The Xcite®+ gun family is the result of Sames experience since 1925. The Xcite®+ gun brings an excellent comfort to the operator. Its ultra light trigger, its design, its ergonomics and its swivel fitting reduce the operator fatigue, improve the productivity and reduce risks of RSI (Repetitive strains injuries).

Xcite®+ family uses high quality components which ensure a perfect reliability maintaining a high level of performances. The last generation of Airmix® atomization aircap offers unsurpassed finish quality.

The sprayer has the ability to modify significantly the pattern without changing the tip while using minimum atomization air and pressure. This is very useful when painting complex shape parts.

FEATURES	BENEFITS	SPECIFIC TO ONE FAMILY
Improved atomization quality Increased transfer efficiency	Outstanding spraying quality with reduced overspray	All
High transfer efficiency - up to 86%	Significant paint savings and less cleaning necessary	All
High flow rates	To meet demand production needs	All
Lightweight, light trigger and flexible design	Reduced fatigue and excellent working conditions for increased productivity	Xcite®+ Light
Simple construction with fan adjustments and EZ technology on aircap	Constant finish quality and smart usage from horizontal to vertical spray pattern	All
Compact design with optional whip hose connected directly to the spray gun	Easy access into recessed areas	Xcite®+ Light
Stainless steel fluid passages, Anodized body and double seal technology	Extended lifetime even with water-based materials	All

Manual spray guns

UNSURPASSED ATOMIZATION FOR SUPERIOR PERFORMANCE

Xcite®+

The Xcite®+ « golden gun » is the reference in the painting industry. Airmix® technology provides an excellent finish and high efficiency.

Xcite®+ comes as standard with a metallic filter and swivel or as a "light" version where the product hose connects directly to the fluid inlet of the gun. Both models feature manual fan control knobs.

Xcite®+ is available in 120 or 240 bar pressure rating. A special version spraying up to 400 bar allows the fine spray of extremely viscous liquids e.g. varnishes and glues.

The legacy Xcite® is fully replaceable by the new Xcite®+ and Xcite®+ light. Those latter models have improved atomization process due to the embedded deflector and diffuser, resulting in better finishing..

Every Xcite®+ gun comes with a VX24 HVLP head; tips are to be ordered separately from our large offering on ***page 21***.

86% TRANSFERT EFFICIENCY HVLP COMPLIANT

WWW

- **Product savings and environmental protection due to high transfer efficiency (up to 86%)**
- **Unsurpassed atomization quality of spraying**
- **Ergonomically designed for outstanding performance**

Automatic spray gun

Automatic Airmix® spray guns provide the same benefits as the manual ones. Instead of a manual trigger, the material flow of product is controlled by an external air trigger. Automatic guns are a quick and efficient solution widely used in robotic paint machines, particularly “flat-liners”. They are compatible with Ultra-Violet paint, glues, varnishes and multi-component products.

Fluid is circulated in the base (type T) , reducing the pressure loss, or in the gun (Type Ω) for quick flushing.

Airmix® automatic guns are mounted with several different heads according to the application. A manual and a remote fan adjustment control (through compressed air) are available as option.

FEATURES	BENEFITS
Reduced size and weight	Reduce the payload and energy consumption on the robotic heads
High transfer efficiency - up to 86%	Significant paint savings - reduce cleaning
Airmix® atomization	Excellent finish quality
Modular design	Quick service: only 4 bolts to unscrew, no need to remove hoses
Stainless steel design	Compatibility with aggressive chemicals
Large dimension fluid passages	Reduce the pressure drop and allows to work from liquid to semi-viscous materials
Choice of circulation in the base or the gun	Performance level guaranteed for most materials and easy flushing
Choice of bases with rear or side connections	To fit each customer need and line configuration
Choice of tips for water-based materials	Optimize performances and flow. Dedicated tips (xtra fine finish) optimizes application performances
Adjusting fan width	easy control of spray area, reduce overlap and overspray
Integrated filtration	Reduce tip clogging

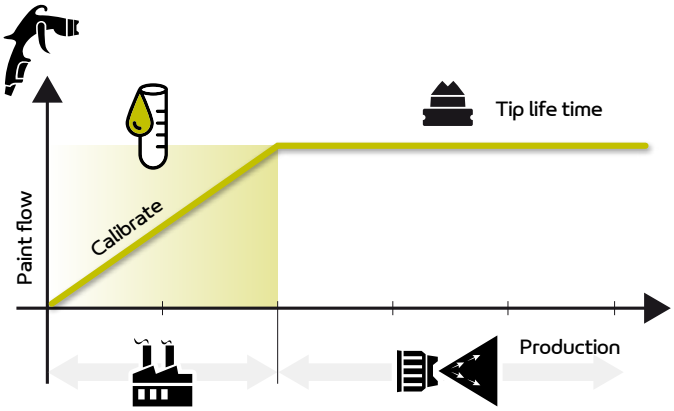
Tips and spraying accessories

Choose tips according to the type of paint, desired flowrate and optimum fan width. Airmix® tips are wearing parts and must be replaced regularly to keep transfer efficiency, paint savings and high quality finishing.

Our spraying tips are made of one of the hardest and most durable material - Carbide. Every tip is tested individually and subject to stringent quality control.

This ensure the best quality, durability and continuity of performance over the product lifetime.

Using genuine spare parts improve the lifetime of the equipment.



HOW TO CHOOSE AN AIRMIX® TIP: XX.YYZ

The first two digits **XX** show the caliber of the orifice, directly linked to the flow rate

The following digits **YY**, are related to the width of the spray pattern at the standard distance of 25cm (10in.)

The digit **Z** defines the type of paint and fan geometry: water based, solvent-based, or assymetric solvent-based

(assymetric fan: same width as a standard one but the flow of paint is higher on one side (70%) than on the other (30%))

FOR EXAMPLE:

Apply 0.6L/min at 120 bar of waterbased paint with a spray pattern of approximately 25 cm

XX -> Caliber **#09** will deliver the appropriate flowrate at 120 bar

YY -> Width **#11** for a spray pattern of 25 cm

Z -> **#2** : buse Xtra fine finish for water-based materials

The part number of the tip will be: 134.5**XX.YYZ**
134.5**09.112**

Important recommendation

After use, remove and clean the tip with water or solvent, keep it overnight in a container filled with perfectly clean material

Note : 100.17 and 100.21 tip have part numbers 134.100.174 and 134.100.214

Manual electrostatic spray gun

Nanogun+ Airmix®

Nanogun+ Airmix® manual electrostatic gun is designed for applying solvent-based materials.
Available in 2 pressure calibrations, 120 and 200 bars (1740 and 2900 psi), it meets a wide range of application requirements.

- Airmix® technology for productivity and outstanding transfer efficiency of 93%
- Electrostatic charge delivers more paint savings
- Lightweight and ergonomically designed

THE BEST COMBINATION FOR PRODUCTIVITY

WWW

Our electrostatic Nanogun+ Airmix® sprayer takes advantage of the method of applying coatings to a metal surface which involves the attraction law between positively and negatively charged particles. Just before the atomized paint leaves the tip (also called nozzle), it is given a negative charge. The charged paint droplets are sprayed through a strong electric field. The positively charged, grounded metal item attracts the negatively charged liquid to its surface.
The power of the electric field also influences the force of attraction. After the electric field has been created, the ions follow the field lines towards the negative charge. As the attraction of the electrically charged particles to the grounded surface is so strong, paint drift is reduced. This means a high transfer efficiency with this electrostatic method. Furthermore, the paint droplets are pulled towards surfaces in all directions, so that all sides of target areas are coated. Some particles actually change direction as they are pulled up, down and sideways towards all angles of the objects to be painted. The underside of objects substrates are coated and paint is renowned for reaching around the back of surfaces if an electrostatic painting system is used. The new coatings will even get into small crevasses and this 'electrostatic wraparound' makes it an ideal technique to apply paint on hard to reach areas with an improved coverage .
Sames electrostatic spray painting Nanogun+ equipment together with the Airmix® atomization quality ensured that paint deposition is optimum and that less paint is released into the air because it is so strongly attracted to grounded surfaces, so overspray is reduced and the environment is safer for the operator.

SPECIFICATIONS

GUN	Nanogun+ Airmix®
Gun weight without hoses or cables	640 g
Gun length	310 mm
Hose lengths available	7.5 m, 15 m and 30 m (option)
Type of spray	**Adjustable flat spray**
Spray width, 250 mm away	120 to 370 mm
Pneumatic supply	**Nanogun+ Airmix®**
Max air supply pressure	7 bar (101psi)
Product supply	**Nanogun+ Airmix®**
Paint flow rate - water	from 250 to 1230(1) cc/min.
Max paint supply pressure	200 bar (2900psi)
Recommended product viscosity	20 to 120 seconds CA4 Cup
Max fluid temperature	40 (°C)

(1): depending on viscosity and gun version

High Voltage	GNM6080
Voltage maxi.	60 kV
Current maxi.	80 µA

BENEFITS

Performance
1 – Automatic control of high voltage to maintain constant paint charge for unmatched Transfer Efficiency of 93%
1 – Independent settings for perfect process control
2 – Optimal wrap-around and penetration effects for unrivaled paint savings with BOTH high current and high voltage
High-quality coverage and regular thickness for outstanding finishing application
Wide range of viscosities and type of solvent based materials to cover all product specifications at reduced costs
Productivity
3 – Air and paint flows easily adjustable with intuitive knobs
4 – Spray change from flat to round type is fast and simple
4 – High quality tungsten carbide tips, individually tested, with repeatable spraying application
5 – High Voltage triggered when needle moves: no pressure sensor for higher safety
6 – GNM 6080 control module provides smart diagnostics for improved maintenance
Lightweight and enhanced ergonomics for increased operators' comfort
Sustainability
7 – Quick Disconnect for enhanced maintenance
8 – External Paint Circuit with simplified access for replacement
Reduced Total Cost of Ownership with around 30% less wearable parts than market standards
Reliable quality of raw materials and components for tough use and long lifetime

Isocube

Insulating cabinet for electrostatic non-ignitable water borne coating application with **Nanogun+ Airmix® H2O** - manual applications - up to 30 liters paint containers.

- **100% safe operation for manual electrostatic waterborne and non-flammable product applications**
- **Plug and Spray: Easy to install, to move around, to maintain**
- **User friendly for outstanding finish quality**

WWW

YOUR SAFETY COMES FIRST!

When spraying waterborne coatings, spray equipment must be isolated in a closed cabinet. The Isocube by SAMES KREMLIN fully complies to this requirement. This compact insulating cabinet can be installed close to the paint location. A large door provides easy access to load the paint tank.
A built-in safety system ensures the grounding of the paint circuit when the gun is not spraying or when the door is opened.

SPECIFICATIONS

GUN	Nanogun+ Airmix® H2O
Gun weight without hoses or cables	640 g
Gun length	310 mm
Hose lengths available	7.5 m / 15 m
Type of spray	**Adjustable flat spray**
Spray width, 250 mm away	120 to 370 mm
Pneumatic supply	**Nanogun+ Airmix®**
Max air supply pressure	7 bar (101psi)
Product supply	**Nanogun+ Airmix®**
Paint flow rate - water	from 250 to 1230(1) cc/min.
Max paint supply pressure	7 - 195 bar (102 - 2827psi)
Recommended product viscosity	20 to 150 seconds CA4 Cup
Max fluid temperature	40°C (104°F)

(1): depending on viscosity, gun and pump version

Designation	Isocube
Weight	180 kg (400 lbs)
Tank Capacity	30 L. (8 gal)
Discharge Time (on door opening)	< 0.8 sec.
Dimension (L x W x P)	110 x 164 x 65 cm (49 x 73 x 30 in.)

High Voltage	GNM6080
Voltage maxi.	60 kV
Current maxi.	80 µA

Manual electrostatic spray gun

Isocube

BENEFITS

Performance
1 - Electrical safety of operators: automatic discharge to earth in case of a power shutdown or when the operator opens the door (<0.8s)
1 - Perfect quality of electrostatic insulation for efficient wrap-around effect
1 - Immediate productivity internal charge (60 kV): generator built in the gun
2 - Discharge resistor
Productivity
1 - Plug and spray: set-up and running within 10 minutes
1 - All unit control remote to front side
3 - Easy integration thanks to clean side and back faces
4 - Easy access to the pump and paint container
6 - Retains product leaks and rinsing fluids
Sustainability
5 - Robust design for durability
6 - Easy to clean working cell. Polypropylene welded body
7 - Easy hose assembly and connection to smart manifold panel
8 - Removable rack for easily cleaning the paint containers

YOUR SAFETY COMES FIRST!

To provide the safest equipment for the painters, the Isocube insulating cabinet is designed and manufactured with full welded polypropylene panels to be electrostatic proof, integrates the most advanced technologies to keep your productivity at its best

– among of them a single and complete control panel

and is beyond the environmental and safety regulations:

- retention tray to collect spillage of product out of the paint bin
- a ground resistor to drain electrostatic charges in less than 10 sec. when not spraying
- quick and full charge drain on door opening or power shutdown or emergency stop (<0.8 s) with its fast response grounding air piston.

F = Technology FLOWMAX®

Notes

Airmix® pumps

Sames reciprocating positive displacement piston pumps .
Sames is a world leader in design and manufacturing of pneumatic piston pumps. They are the essential tool for any painting specialist

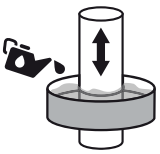
- High-pressure output ensures atomization of the most viscous products
- Double-action piston
- Turbo option with special air distributor which prevents icing and allows long duty cycle – particularly suited for circulation and paint kitchens

Pneumatic compressed air power drives these pumps. These pumps are double acting pumps with displacement occurring on the up and down stroke of the pump. This provides low-shear pumping action that is very friendly to a wide range of materials resulting in little or no degradation. It also guarantees a continuous supply of fluid, thus ensuring the smoothness and regularity of the sprayed film.

Pneumatic drive pumps are inherently explosion proof. With proper installation pneumatic, pumps are safe for use with solvents and other flammable materials. Pneumatic pumps can be safely used in hazardous areas and wet environments.

Sames pneumatic drive pumps automatically start and stop with the opening and closing of the system dispense/spray outlet valve. These pumps build to a static pressure and then automatically stop until the outlet valve is opened.

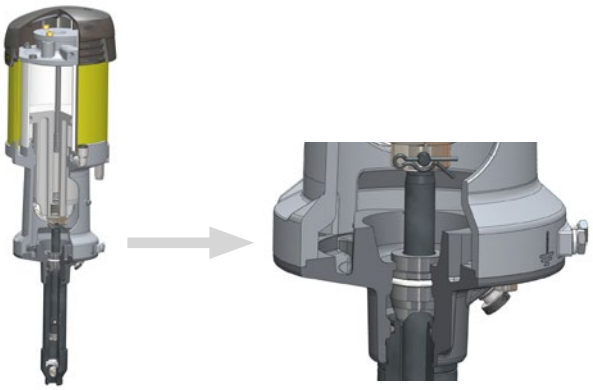
Cup pumps and Flowmax® bellow pumps



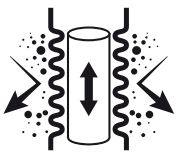
Cup lub technology

Cup pumps include an oil-filled cup at the top of the hydraulic section.

- **The lubricant ensures the correct movement of the piston and the long lifetime of the pump seal.**
- **Prevents the pumped product from drying on the piston**
- **Prevents piston overheat.**
- **Provides a visual indication of the state of the seal**



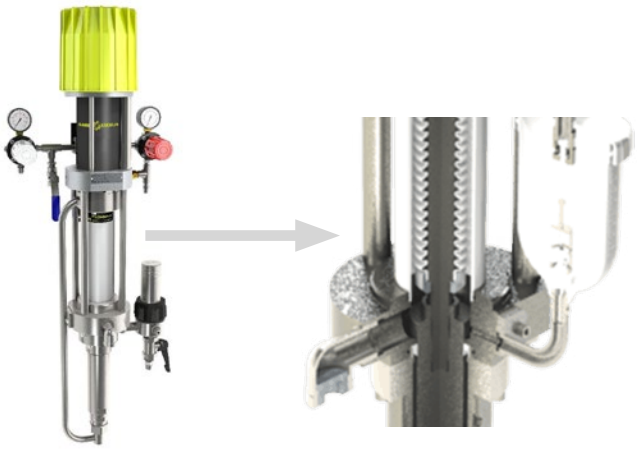
Cup pumps are particularly adapted to fast color change, water or solvent-based materials. Seals are available of several types. "Chevron" seals require regular seal verification and tightening.



Flowmax® technology

Flowmax® bellow pumps include a polyethylen bellow seal, which protects the piston shaft from air and light.

- Offer very quiet piston transitions
- Reduce the risks of leaks
- Substantially outlast cup seals



Flowmax pumps are particularly adapted to High-viscosity materials. As there is no contact between the shaft and outside air, they are the best for moisture sensitive materials like hardeners or shear-sensitive materials. They require less maintenance than cup seals.

Airmix® pumps

What do you need to choose a pump ?

EACH PUMP REFERENCE IS MADE OF TWO NUMBERS AND ONE LETTER :

- **The first number defines the ration between the supplied air pressure and the high-pressure fluid.**
- **The letter is 'C for Cup pumps and 'F' for Flowmax Flowmax® bellow pumps**
- **The second number is the capacity of the hydraulic section in milliliters or cubic centimeters.**

THE FOLLOWING INFORMATION WILL HELP YOU CHOOSE THE RIGHT PUMP FOR YOUR APPLICATION :

- Maximum applying pressure
- Chemical composition and compatibility of the spray material.
- Length and diameter of hoses
- Desired flow rate
- Frequency of material or color change
- Opportunity to use Airless spraying (need for high-pressure)
- Useful information can usually be found from the Material Technical sheet and the Material Safety Data sheet

Choosing the right characteristics may sometimes become a challenge. Please do not hesitate to contact your closest Sames representative for help. We are paint spray specialists.

STEP 1 - defining the right pressure

Most industrial installations deliver 6-7 bar continuous air flow. **Divide the desired fluid pressure by 6 and choose the pump whose pressure ratio (the first 2 digits) is superior.**
If you are using very viscous products, long or narrow hoses, take some safety margin in your calculation. Increasing the safety margin between the operating pressure and maximum design pressure improves the lifetime of the pump.

Example:
spraying @150 bar gives a ratio of 25
use a pump 30xxxx or above

STEP 2 - defining the pump capacity

Divide the flow rate in CC/minute (or cm3/minute) by 10 and oversize to the next pump capacity (the end 2/3 digits).
Do not forget to increase the capacity if you are using circulation and/or multiple spray guns.
A large pump will run at lower speed and require less maintenance than a smaller one - but the color change will require more time and cleaning fluid.

Example:
0.8 liter/minute or 800 cc/min
> gives an inner size of 80 cc
> use a pump xxx**100** or above

STEP3 – Cup or Bellow seal

Choose according to your application and the information above.
Cup seal pumps are noted " **xxCxx** "
and
Flowmax® bellow pumps are noted " **xxFxx** "

STEP 4 – Material

All the **Sames** pumps offer stainless steel material for all metallic parts in contact with the fluid. MB-A seals and cartridges (a patented Sames design) cover a very large range of applications (including water-based and moisture-sensitive materials) and provide reduced dead zones, allowing for quick color changes. Materials for specific needs are available for particular cases.

STEP 5 – Mounting

Pumps are available bare, wall-mounted or pre-installed on carts. If the pre-mounted cart option is not offered in the pump page, please choose the adequate cart from the table in the "Carts " pages.

Airmix® pumps

Particular cases

Material selection is based upon the material being pumped and its characteristics and chemical composition.
Users should always follow the material compatibility recommendations of the material supplier combined with previous successful experience. Determining the material compatibility usually requires the reference to the material safety data sheet of the product.

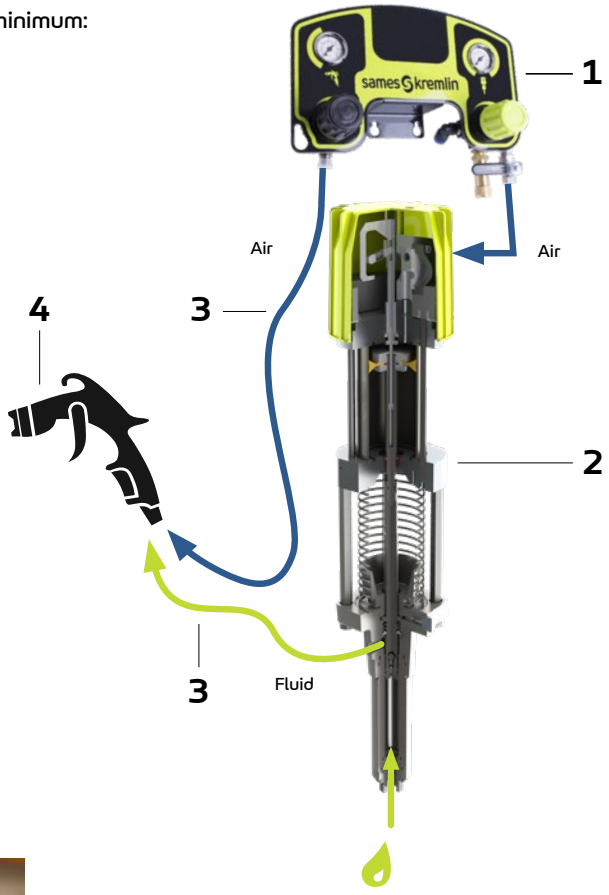
- GT seals are particularly suited to UV-cured paints and coatings
- PH pumps and accessories are have a choice of acid-resistant materials, for high acidity (ph) products like 2K hardeners.
- WB pumps have increased resistance to Water-based materials
- Turbo pumps with a particular anti-icing air distributor are used in case of continuous, high flow rate.

Airmix Spraying packs

A spraying pack includes the following equipment, at the minimum:

1. **AIR PRESSURE REGULATORS**
2. **PUMP**
3. **AIR AND FLUID HOSES**
4. **AIRMIX SPRAY GUN**

= **spray pack**, *see table page 13*



Optional equipment:

- Suction tube with stainless steel strainer
- Gravity Hopper
- High pressure filter at the pump outlet
- Wall mount brackets for fixed installation
- Heavy-duty carts for cart work

10C18 Airmix® pump

The 10C18 Airmix® pump is perfect for painting small quantities of fluid products, water or solvent based.
The simple design reduces maintenance and cleaning time.

- **Fast color change, minimum solvent consumption**
- **Good chemical compatibility with several choices of seals**
- **Large range of "ready to spray" kits**

PISTON PUMP WITH CUP SEAL FOR FINE FINISHING APPLICATIONS

= *available in* **spray pack** *version, see table page 13*

CONFIGURATION OF THE 10C18 AIRMIX® PUMP

The 10C18 is only available as a spray pack, please refer to **page 13** for selection.

Cup pumps

16C240 Airmix® pump

The 16C240 Airmix® pump is designed to pump large quantities of fluid product. Turbo version prevents ice build-up on continuous operations.

- **Heavy duty air changeover valves**
- **Used for circulation and/or multiple guns.**
- **Very large choice of seals and packing materials (Leather, PU, UHMW...)**

Cup pumps

20C50 Airmix® pump

The 20C50 Airmix® pump is a medium-range, all purpose pump for medium viscosity products. Includes a special model for water based and high solid content.

- **Suction rod or gravity hopper**
- **Heavy duty air changeover valves**
- **Good chemical compatibility with GT, Chevron, PE seals**

RECOMMENDED FOR ONE TO 8 AIRMIX® GUNS OPERATIONS WITH ICE FREE PERFORMANCES

ACCELERATOR OF PERFORMANCE

30C25 Airmix® pump

The 30C25 Airmix® pump is for painting small quantities of medium viscosity products, water or solvent based. Up to 180 bar of fluid pressure to compensate pressure drops.

- **Good chemical compatibility with GT or MB-A cartridges**
- **Suction rod or gravity hopper**
- **Large range of "ready to spray" kits**

35C50 Airmix®/Airless pump

The 35C50 Airmix® pump is a medium-range, all purpose pump for medium to high viscosity products. Up to 210 bar of fluid pressure allows Airmix® or Airless applications.

- **Suction rod or gravity hopper**
- **Available in kits with one or two air regulators**
- **Good chemical compatibility with GT or MB-A cartridges**

PISTON PUMP WITH CUP SEAL FOR HIGH VISCOSITY

40C50 Airmix®/Airless pump

The 40C50 Airmix® pump is a medium-range, all purpose pump for high viscosity products. Up to 240 bar of fluid pressure allows Airmix® or Airless applications.

- **Suction rod or gravity hopper**
- **Two gun management available**
- **Good chemical compatibility with GT, Chevron, PE seals**

PISTON PUMP WITH CUP SEAL FOR HIGH VISCOSITY

40C100 Airmix®/Airless pump

The 40C100 Airmix® pump is designed for high flow, high viscosity products. Up to 240 bar of fluid pressure allows Airmix® or Airless applications.

- **Used for circulation and/or multiple guns.**
- **Heavy duty air changeover valves**
- **Large chemical compatibility with multiple seals material choices (Chevron, GT, PU)**

PISTON PUMP WITH CUP SEAL FOR HEAVY DUTY APPLICATIONS

40C260 Airmix®/Airless pump

The 40C260 Airmix® pump is designed to pump extra large quantities of high viscosity products. Up to 240 bar of fluid pressure allows Airmix® or Airless applications.

- **Used for circulation and/or multiple guns.**
- **Very large choice of seals and packing materials (Leather, PU, UHMW)**
- **Fluid output fitting 3/4"JIC for high flow-rate installations**

PISTON PUMP WITH BELLOW FLOWMAX® SEAL FOR HIGH FLOW RATE

16F240 Airmix® pump

The 16F240 Airmix® pump is designed to pump large quantities of fluid product.
Turbo version prevents ice build-up on continuous operations.

- **Heavy duty air changeover valves**
- **Used for circulation and/or multiple guns.**
- **Very large choice of seals and packing materials (GT, PU, UHMW...)**

17F60 Airmix® pump

The 15C50 Airmix® pump is perfect for painting medium quantities of fluid products like moisture-sensitive hardeners. Up to 100 bar of fluid pressure provides excellent suction capacity.

- **Good chemical compatibility with GT cartridges**
- **Regular output, low pulsation at changeover**
- **Suction rod or gravity hopper**

PISTON PUMP WITH BELLOW FLOWMAX® SEAL FOR MEDIUM APPLICATIONS

20F50 and 20F50PH Airmix® pump

The 20F50 Airmix® pump is a medium-range, all purpose pump for medium viscosity products.
20F50PH model is specially suited to water based products and corrosive catalysts.

- **Heavy duty air changeover valves**
- **Excellent fit with 2k-3k dosing machines**
- **Good chemical compatibility with GT seals.**

PISTON PUMP WITH BELLOW FLOWMAX® SEAL FOR MEDIUM APPLICATIONS

20F100 Airmix® pump

The 20F100 Airmix® pump is designed to pump large quantities of medium viscosity products.Turbo version prevents ice build-up on continuous operations.

- **Used for circulation and/or multiple guns.**
- **Heavy duty air changeover valves**
- **Good chemical compatibility with GT seals.**

PISTON PUMP WITH BELLOW FLOWMAX® SEAL FOR MEDIUM RANGE APPLICATIONS

34F60 Airmix®/Airless pump

The 34F60 pump is designed to pump small quantities of medium viscosity products. Up to 200 bar of fluid pressure allows Airmix® or Airless Fine Finish applications.

- **Good chemical compatibility with GT seals.**
- **Best for moisture sensitive products**
- **Suction rod or gravity hopper**

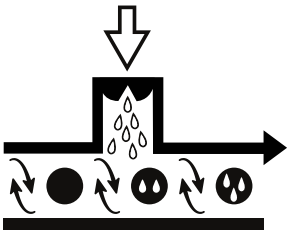
Notes

Electronic mixing and dosing systems

Two-components (**2K**) and Three-component paints (**3K**) offer excellent mechanical resistance beautiful finish and greatly reduce the emission of Volatile organic compounds (**VOC**).
They need precise, homogenous dosing and must be applied within a certain time after mixing, called '**pot-life**'.

Sames is the pioneer in 2K -3K dosing machines with dedicated technologies:

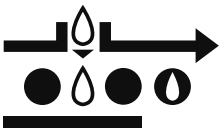
Spraymix technology



With Spraymix technology, a specific catalyst volume is sprayed directly into a vortex of base material. This generates a premix at the injection block and then the mix flows through a high performance static mixer and is applied immediately

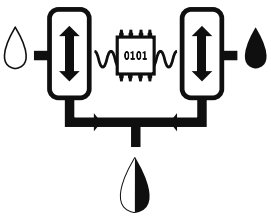
Patented dosing system: spraying the catalyst into the base stream

Injectmix technology



With Injectmix technology, a specific catalyst volume is injected into a continuous flow of base material. Then the mix flows through a high performance static mixer and is applied immediately.

PFE technology



Pulse-Free Electronic Control (PFE) acts on unique pump changeover to ensure consistent metering, and homogeneity of the mix at all times. The combination of those technologies allows a very high accuracy dosing of +/- 1%.

Airmix® **PU3000** is a simple, cost-effective dosing unit available in 2 liters and 4 liters versions.

Cyclomix Evo is a high end modular system, compatible with airspray, airmix® , airless and electrostatic spraying technologies. Its controller allows the transmission and recording of machine data through the company network.

SPECIFICATIONS

MACHINE NAME		PU3000	CYCLOMIX® Evo
Dosing type		Mechatronic	Electronical
Ratio		Adjustable

PU 3000 Airmix®

The PU3000 Airmix® combines electronic control and mechanical dosing and mixing and includes pumping, metering and electronic functions. The user-friendly control box allows the operator to intuitively learn how to operate the machine. It is available in 2 versions : 2 liters and 4 liters

- **User friendly**
- **Material mixing quality**
- **Security of application**

PLUG AND SPRAY SOLUTION PUMPING AND MIXING 2 COMPONENTS WITH ADJUSTABLE RATIO

WWW

FEATURES	BENEFITS
Plug and Spray	Quick start-up
Sames patent: Free Pulse Electronic Control (FPE) Innovative control system of pump change-over	Constant fluid flowrate Unsurpassed +/- 1 % mixing accuracy and +/- 1 % repeatability
Direct injection in the high performance static mixer	Perfect mixing
Recording of fluid consumptions and VOC Possibility to print records	Fluid and solvent consumptions stored in memory
Automatic component management : base, catalyst and solvent Automatic flushing and material generation User-friendly control panel	User-friendly and easy programming for the operator
Preventive maintenance alarm Continuous ratio checking and alarm Low level drum alarm	Safe operation
Ratio check kit in standard with 2 liters test tube Filter and drain assembly in standard	Visual control of mixing accuracy No product loss
Sealing done by a Flowmax® bellow on the catalyst side	High reliability Ideal to work with moisture-sensitive catalysts
Variable ratio from 5 to 160 % Suitable for Airmix® spraying technologies Very low flow rate from 10cc	Suitable for use on a wide range of markets

CONFIGURATION OF THE PU 3000 AIRMIX® DOSING AND MIXING UNIT

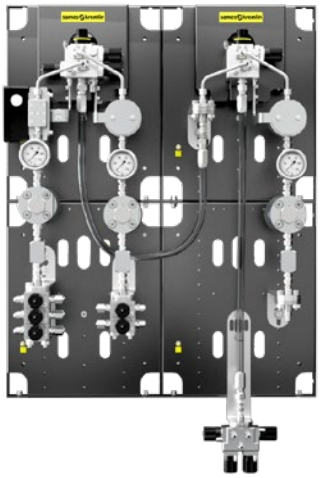
FLUSHING PUMP

Description	Suction rod	Purge rod	Air regulator fluid pressure	Part number
30-C25 flushing pump - PU 3000	• (Ø 16)	-	-	151.145.090

OPTION

Description	Part number
Spray booth glass mounting kit	155.660.340

The installation of control boxes is in a non-explosive area.



Supplied without pumps or guns to be ordered separately
Designed to supply one gun only

Cyclomix® Evo

Electronic dosing and mixing system for 2 and 3 component materials. Modular, configurable and upgradable system that allows to perfectly meet all needs.

- **Always fresh material on demand**
- **Elimination of errors caused by a manual mixing**
- **Reduced and optimized volume of waste**
- **Complete traceability of all production and maintenance data**
- **Connectivity (Smartphone App, OPCua, robot communication...)**
- **Compatible with the majority of existing products on the market and in particular acid catalysts**
- **Flexible modular design - up to 99 components**

WWW

WWW

FEATURES	BENEFITS
Unique and patented injection principle	Dosing +/- 1% and repeatability +/-0.5%
Automatic and optimised color change management (flushing, priming)	Quick start-up. Minimal loss of paint and solvent
Optimised management of paints and solvents (paint optimisation functions, customisable flushing by step, autonomous priming, etc.)	Solvent saving and environmental friendly
Multilingual and fast touch screen	User-friendly and easy interface for a quick start by a new user
Continuous control of the ratio and production parameters	The paint applied to the parts is always as expected
Stainless steel design	Compatible with a wide variety of products (waterbased paint, acid catalyst, polyurethane, epoxy, polyaspartic...)
Recording of all events (production, maintenance, etc.)	Improve the reliability of production (traceability of its production, history of modifications)
Possibility of controlling the Cyclomix® Evo from inside the booth thanks to the remote control box and the optional window kit	Better ergonomy and improved productivity
Preventive maintenance on the HMI and via the smartphone application	Optimization of maintenance activities and productivity gains
Independent management of 2 guns	Flexibility of work. Solvent saving
No pre-mixing chamber: optimized fluid passages w/o retention zones	Perfect flushing, prevent product waste
One level of access for each user	Safe use
Different flushing sequences (air-solvent as standard)	Solvent consumption optimlization upon recipe
Volume or time flushing. Multiples solvent choice for each recipe	Optimized flushing
Various Product mesurement technology: mass or gear flowmeter	Handles a large range of materials
Available with different communication protocols	Control of the Cyclomix® Evo by robot or PLC

Remote control box	155661880
Window kit for remote control box	155661887
Flushbox Fpro, Fstart, Xcite, Sflow	155710000
Flushbox Nanogun	155710050
Frame support for control panel	155661872
Air supply kit (regulator + filter + purifier)	155661391

Fluid regulators

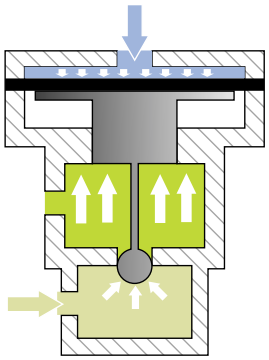
Fluid pressure regulators are used to reduce and balance the fluid pressure delivered from a pump to the applicator.
Fluid regulators should be placed as close as possible to the point of application.

The input fluid pressure should be higher than the regulated pressure.
For good control in a pneumatic regulated system, a stable air supply is required. Fluid supply pulsation should be minimized to help ensure ideal regulator function.

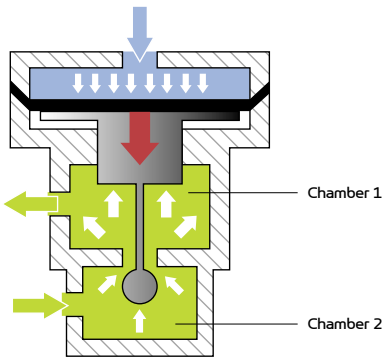
SPECIFICATIONS

		PRESSURE REGULATOR		
		MANUAL CONTROL	PILOTED	BACK PRESSURE
Pressure range (bar)	Inlet	250 max	120 max (version 5-40) 250 max (versions 10-70 and 10-120)	120 max
	Outlet (upon version)	10 - 70 10 - 120	05 - 40; 10 - 70; 10 - 120	10 -120
Weight (kg)		3.6	4.1 (version 10-120)	3.6
Width (cm)		8.9	8.9	8.9
Height (cm)		20	27.5	20
Wetted parts		Stainless steel, PTFE, carbide		

FLUID FLOW
Force equilibrium unbalanced: the air piston doesn't move; the piston ball check "Inlet Material" is closed by the fluid pressure.



PRESSURE DROP
As soon as a pressure drop occurs in the system the regulator piston moves with air pressure by opening the ball check and allowing material to flow in chamber 2.



Pressure regulator manual control

Airmix® fluid regulator is designed for low to medium viscosity materials.

- **Stainless steel design to handle water-based and solvent-based materials**
- **High precision regulation**
- **Constant fluid outlet**

PRESSURE REGULATOR – MANUAL CONTROL – AIRMIX®

Description	Type	Fluid fittings	Part number

Fluid line

Heater – Magma 500

Material fluid heater is an auxiliary device used for material preparation and air heating. Higher layer thicknesses can be achieved by heating the material, as well as shorter drying times and higher finishing quality.

- **High pressure for heavy duty applications**
- **Excellent performances even without Fluid recirculation**
- **Stainless steel design and Explosion proof, compatible with most coatings**

WARM UP PRODUCTIVITY

WWW

FEATURES	BENEFITS
Standard Stainless steel design	Compatible with water-based materials
Thermometer integrated into the command box	Direct information on the desire temperature
Flexible positioning of the heat exchanger connections	Easy implementation
The highest fluid passage volume of the market	Insure outstanding performances even when using as one pass (without recirculation)
Possibility of heating atomizing air	Increase finishing quality and regrease drying times
ATEX Compliant	Can be used in hazardous atmosphere
Weather resistant	Always efficient even in high humidity environments

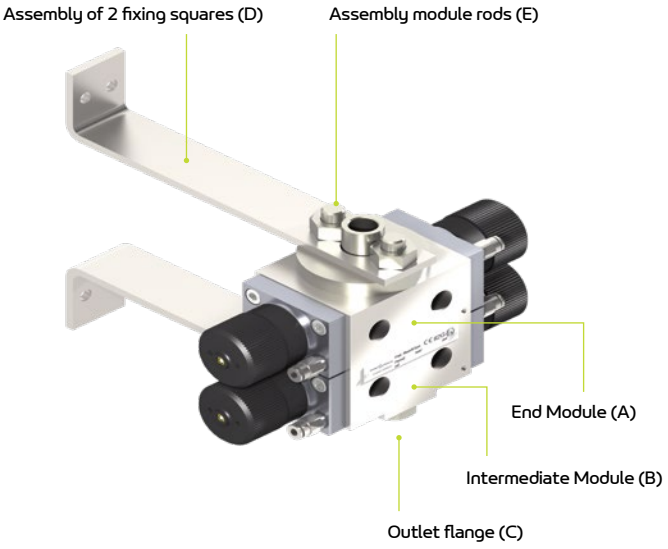
CTM Color Change Valves



CTM are designed for a rapid color change:

- No dead zone inside CTM reducing flushing time and solvent consumption
- PTFE seals
- Design allows modular expansion
- Monostable valve normally closed
- Visual Opening detector
- Two valves per module (the solvent valve should be facing the fluid outlet)

CTM VALVE SPECIFICATIONS

Filters

A fluid filter is assembled on the outlet of the pump.
Ph versions are particularly suited to low ph (acid) products like catalysts.
Most filters have dual output for connecting two guns.

BARE FLUID FILTERS (SCREEN NOT INCLUDED)

Agitators

Cyclix™ drum cover agitators

This elevator-agitator for 20-40 to 200 L drums features a double-effect jack for a fast lift of a stainless steel cover fitted for a quick material drum change. The cover is equipped with a motorized agitator fitted with blades for low viscosity materials and a full stainless steel rod.

The elevator is supplied on a large fixing plate which makes it very stable and easy to install in paint kitchens, existing installations or an essential component of new installations.

- **Constant quality of mixed materials**
- **Stainless steel wetted parts**
- **High ROI – no product loss**

WWW

FEATURES	BENEFITS
Stainless steel (agitator cover, suction and drain rods)	Compatibility with all materials
Adjustable suction rod height	No product loss
Suction and return tubes	Suitable for recirculating
Double effect jack with 3 positions command lever: up, stop, down	Important flexibility
The agitator cannot work during elevator movements	Security

SPECIFICATIONS

AGITATOR NAME	CYCLIX™ 20-40	CYCLIX™ 200
Capacity (L)	20 - 40	200
Motor type	Pneumatic	Pneumatic
Reductor type	-	Gear train
Rotation speed (rpm)	300-2000	60 - 300
Motor torque (Nm)	2.2 at 100 rpm	7.9 at 100 rpm

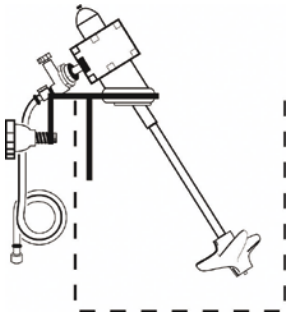
Suction/exhaust kit	-	-	-	-	154.261.400

RECOMMENDED ACCESSORIES

Description	Part number
1/4" air lubrificator + support	154.261.997
Exhaust assembly with oil recovery (length 1 m)	154.261.996
Air feeding kit	154.261.930
Drum roller unit for 200 litres drum	151.098.100
Slotted paddle for thick materials	154.261.952
HP 150 2 liters lubricant can	149.990.017



AGITATORS FOR EDGE PAIL MOUNTING

Agitator for barrel edge mounting.
Minimum barrell height of 300 mm.

Description	Part number
Bare agitator	051.332.610
Agitator with 25 cm hose	051.332.600
Agitator with 5 m hose	049.220.710
System for barrel mounting	049.220.720

AGITATORS ON STAINLESS STEEL COVER

Agitator:
For drums diameter between 295 and 325 mm.
Minimum drum height of 390 mm.

Description	Part number
Agitator for Ø325 cover	903.290.101

STRAINER FOR CYCLIX™ SUCTION RODS

Description	Part number
Strainer for cyclix™ suction rods (pack of 2) - mesh 30	154.261.940

Fluid Hoses

Roll hoses are non-conductive, grey color and can be used up 120 bar and 100°C. They are sold without connections as 25 or 100 meters reels. Female fittings ½"JIC are available as screw or crimped type.

Non-conductive hoses reels without connections – Grey color

Designation	Part number	
Internal diameter mm (in.)	**4.8 (3/16")**	**6.35 (1/4")**
Reel 25m	050.450.060	050.450.070
Reel 100m	050.450.061	050.450.071

Connection fittings for hoses in rolls

Fitting alone to crimp	905.063.304	-
Fitting alone to screw in	905.063.308	905.063.309
Fitting alone to crimp (stainless steel)	-	905.063.355
Fitting alone to screw in (stainless steel)	905.063.358	905.063.357
Spring for fitting to crimp	905.063.361	-

Pre-assembled hoses can be used up 120 bar (grey color), 240 bar (phosphor color), 400 bar (black color) and up to 100°C.
They are sold as fully assembled hoses with one female ½"JIC connection at each end.
Connections are made of treated steel or stainless steel.

Pressure gauge - central inlet	40	0 - 6	910.011.205
Pressure gauge - central inlet	50	0 - 6	910.011.403
Pressure gauge - side inlet		0 - 10	910.011.402
		0 - 4	910.011.404

DE37 Purifier-regulator

Usually fitted in the paint spray booths. Its twin-body construction ensures completely water and oil free.

Standard equipment:

- One regulated pressure gauge
- One F1/4 BSP
- One tap valve F1/4 BSP
- Two air outlet taps: M1/4 NPS

Technical characteristics:

- Maximum operating air output: 37 m3/h
- Maximum operating air pressure: 10 bar
- Height: 290 mm
- Air inlet opening: F1/4 BSP

Specifications		DE37

Operators accessories

1 ANTI-STATIC COVERALLS

Size “S” to “XXL”. Grey.
Made of special fabric, extremely sturdy, recommended for liquid paints.
Reduces the risk of electric charges accumulation

2 HAT, GREY (ONE SIZE)

3 COVERBOOTS (ONE SIZE)

4 DUST MASK

Meets European standard EN-149-2001, class FFP2. Provides protection only from wearer from mechanically and thermally produced particulates. May be used to protect against concentrations up to 10 times the Average Exposure Value (AEV), Belgium upper limit (VLB).

5 ANTI-SOLVENT MASK

Complies with European standard EN 405:2001. Protection against most vapours/gases and particles such as:
• Inorganic vapours and acid gas, up to 1000 ppm or 10 x VME/VLB, taking the lowest of the 2.
• Particles up to 50 x VME/VLB

6 GLOVES - NITRILE RUBBER (ONE SIZE)

Provide protection against numerous chemicals such as alcohols, aromatic and chlorinated solvents (within the provisions of the chemical resistance chart).
Complies with European 89/686/CEE Directive.

N°	Part number
1	(S) W5GMAS059

General informations

Paint

Decoration and protection are often two associated functions. To achieve these aims, and to re-finish products, we have at our disposal a tremendous number of surface treatments, (for example nickel or chrome plating etc.).

Paint is also perfect for both of these functions. In addition, paint is universally used, and can be applied on any surface, such as wood, metal, stone, leather, plastic and elastomers. Paint does not come as a finished product, and hence the quality of application will depend on all its stages of preparation, which we will call the "Painting System".

In general, the stages are as follows :

- Surface preparation
- Application of the coating (paints, stains, varnishes, etc.)
- Drying

Paint

Surfaces preparation

There is a wide range of physical and chemical treatments to which the surface to be coated can be subjected, before receiving the first coat.
Good surface preparation is the essential base for long-lasting protection and a good visual finish on any material.

The surface preparation is often the longest, and therefore the most important task involved in coating a part.

Material	Physical preparation	Chemical preparation
Steel:	stripping, shotblasting, brushing	acid
Aluminum:	Brushing	Vapor blast
Wood:	Sanding	
Plastic:	heating	plasma torch, acid

Once treated, the surfaces should be free from :

>> particulate or non-adherent substances

>> oil, silicone, grease and moisture

To obtain the best protection against corrosion (mainly for metal), we coat with either :

>> a wash primer or

>> an anti-corrosion paint

A **wash primer** is a liquid product of around 16s Zahn#2, which should be sprayed in a thin coat, to get into all the imperfections in the surface of the metal. The phosphoric acid which it contains attacks the surface of the metal and forms an isolating and impenetrable layer of phosphate. The wash primer is highly valued for its adhesion to the metal. Importantly, it should then be coated with a layer of paint, which plays the role of a protective shield.

16s CA_4

An **anti-corrosion** paint is a product which should be sprayed in a thicker layer than the wash primers. Containing anti-corrosive elements, it has the advantage of protecting the metal both physically and chemically at the same time. Also, it saves time, as a single coat applies both the anti-corrosive chemicals and the protective shield to the metal.

40s CA_4

These paints are used very frequently on metal framework, as the coating can be left as it is, or covered subsequently with the desired paint finish.

Paint

Looking at a painted object will tell us that paint is hard. However, the paint which we spray is a liquid.

This transformation is due in the main part to several components of paint whose functions are described below.

Components of paint

Paint contains one or more substances which are generally dissolved in a solvent (or in water) and which regain their solid consistency after drying on the surface.

Amongst these substances, we find :

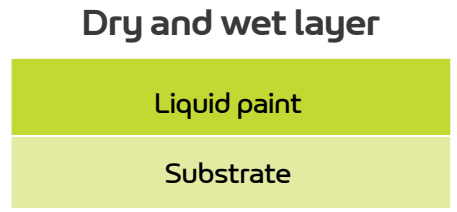
>> Binders
>> Pigments
>> Fillers

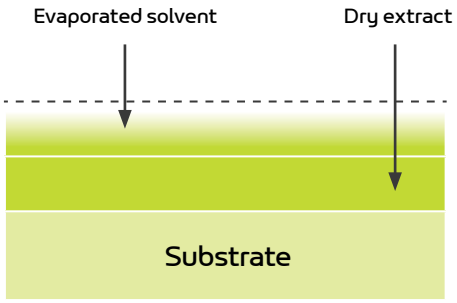
The binder is generally a more or less transparent body which resembles a resin. Dissolved on its own in a solvent it produces a lacquer:

Binder + Solvent = Lacquer

Paint often bears the name of the type of solvent on which it is based (cellulose paint is based on a cellulose solvent). To darken the finish, we add highly colored and very fine powders, which we call pigments:

Binder + Solvent + Pigments = Paint





GLOSSARY

>> **Sticky film :**
we say that a film is sticky when we put a finger on it and it feels like adhesive tape

>> **Dust-free film :**
we say that the film is dust-free, when any dust which lands on iot can be removed by blowing

>> **Film that is dry to the touch** : we say that the film is dry to the touch when a finger does not leave a mark on the surface.

>> **Finger-nail hard** : we say that the film is finger-nail hard when we cannot mark it. In this state, it can be polished or sanded.

Paint

Finally, to give the finish specific characteristics, we use a whole range of fillers and additives. Solvents make it possible to dissolve the other components of the paint, and can be classed into the following three groups:

>> **Fast solvents** : they evaporate extremely quickly, to such an extent that the paint can dry too quickly, not allowing it enough time to adhere correctly to the surface.
These solvents are never used on their own.

>> **Slow solvents** : they evaporate very slowly, allowing the paint to adhere properly. They leave a soft and smooth finish. Slow solvents are not very widely used because they significantly increase the drying time.

>> **Medium solvents** : they evaporate in a few seconds ; this is enough to ensure good adhesion, while giving a satisfactory drying time.

First of all in order to make the correct paint, the manufacturer makes a list of the solvents capable of dissolving all the binders he wishes to include, and then chooses those with a volatility suitable for the planned method of drying(whether at room-temperature or in an oven). Before application, paint viscosity is often reduced to give a consistency which is ideal for the task.

Paint consistency

Viscosity

The consistency of the paint should be adapted for the type of application. It is identified by the extent of its viscosity, which is expressed in centipoises or by measuring the time in seconds that it takes for a certain amount of paint to run through a calibrated viscosity cup. There are different viscosity cups used for measuring the viscosity of paints. The table below shows the relationship between cup size sand viscosities in Centipoises.

AFNOR 4 (CA4)	ISO 4	mPas.s	Centipoises	Ford 4 (CF4)	DIN 4 (D°)	CH (Fr)	ZAHN (n°2)
12	-	20	20	10	11	6	18
14	17	25	25	12	12	7	19
16	23	30	30	14	14	-	20
20	34	40	40	18	16	8	22
25	51	50	50	22	20	9	24
29	60	60	60	25	23	10	27
32	68	70	70	28	25	-	30
34	74	80	80	30	26	11	34
37	82	90	90	33	28	12	37
40	93	100	100	35	30	13	41
45	-	120	120	40	34	14	49
50	-	140	140	44	38	15	58
56	-	160	160	50	42	16	66
61	-	180	180	54	45	17	74
66	-	200	200	58	49	18	82
70	-	220	220	62	52	19	-

Nota: 1 poise = 100 centipoises and 1 mPas.s = 1 centipoise (If the density of the paint is equal as 1 and if it is a fluid Newtonien, that is to say no thixotrope).

Paint

The effect of temperature on viscosity

Viscosity of paint changes with variations in temperature; basically, the resins are far more fluid when they are hot.

The table below shows the changes in viscosity of a glycerophthalic paint as the temperature varies. It is worth noting that a paint which has a viscosity of 22 s at 68 °F will have a viscosity of 28 s at 54 °F and of 17 s at 90 °F.

viscosity in seconds CF#4	Temperatures (°C)																			
	2	4	6	8	10	12	14	16	18	20	22	24	26	28	30	32	34	36	38	40

Example : at a temperature de 20 °C for an announced viscosity of 22 s, you should be ready for the following results:

- at 12 °C, a viscosity of 28 s,
- at 32 °C, a viscosity of 17 s.

Quality problems tend to arise when the temperature of the paint changes during the course of the day. For example : During the course of this day, the viscosity of the paint has moved from 23 to 17 seconds, which leads to a 22 % increase in the output of the spray guns, leading to over-coloring and excessive product consumption.

Paint

	Temperatures (°C)	Viscosity – CA4 (seconds)	Spray gun output (cm3/mm)
morning, cool workshops	15	23	460
Later - workshop heats up	20	20	520
An oven switched on	25	17	560

Worse still, paint prepared in a hot workshop at 20 seconds can be at 28 seconds the following morning, before the workshop has got up to full working temperature: this would lead to a less fine spray and a much greater drying time.

Drying of paints

The component of paint can be classed in two groups :

>> **Dry extracts**

>> **VOC** (Volatile organic compounds), or water in case of water-based paints

Drying paint is all about allowing the volatile products to evaporate and the film to harden. We must distinguish between hardening and drying.

Drying gives us the dry film purely by the evaporation of the volatile products. This happens at two stages: during spraying and within the film. Depending on the temperature, the density of the spray, the type of spray gun and the distance of the spray, the paint can arrive on the surface more or less dry. That means that the majority of the solvent has evaporated before the paint reaches the surface. The drying of the wet film is accelerated when the surface is in a well-ventilated area which has dry air and is dust-free.

Two component material are characterized by chemical drying, i.e. the molecules making up the binder undergo chemical transformation at room temperature during the drying phase. This transformation presupposes a prior mixing of the two components, and implies a limited timeframe for the application of this mixture. After this period, known as the «pot-life» of the mixture, the product is no longer usable.

Practical pages

Choosing a pump

To optimize

- The pump capacity, work out the output you are going to require. This will include the number of sprayguns themselves, and any circulation you plan to have within this system. Once you have this figure, multiply by 1.2, and then choose the pump of which output at 20 cycles per minute is the nearest for a piston pump (30 cycles per minute for a diaphragm pump)

- The compression ratio you will need is defined by the atomizing pressure required on the paint datasheet and the pressure losses inducted by length and diameter of the hosing of your system. To calculate these pressure losses, see page 97.

Example

Let say you want to feed 3 sprayguns with an output of 300 cc/mn each, plus a circulation of 0,5 L/mn. The total output will thus be 1400 L/mn. The optimal pump capacity would be: (1 400 x 1,2) ÷ 20 = 84 cc/cycle. The best-suited pumps will be:

>> the 20C100 (output of 100cc/cycle) for low to medium viscosity materials or small paint circulation (pressure losses <20 bar).

>> the 40C100 (output of 100cc/cycle) for medium to high viscosity materials or medium size paint circulation (pressure losses <100 bar).

>> the 16C240 (output of 240cc/cycle) with possibility to increase the number of sprayguns for low to medium viscosity materials or small paint circulation (pressure losses <20 bar).

Pump Material Feeding

To guarantee the right delivery of product, we offer the following range of equipment for various product viscosity :

>> 0 - 300 cps
• suction rod.

>> 300 to 8 000 cps
• top outlet pressure pots,
• pumps (gravity or suction rod),
• pump with base intake valve.

>> 8 000 to 15 000 cps
• bottom outlet pressure pots,
• pumps with suction rods,
• compressor.

>> 15 000 to 30 000 cps
• no more pressure pot,
• no more suction rod,
• submerged hydraulic pump,
• compressor,
• pump with single action elevator.

>> 30 000 à 1 000 000 cps and +
• pumps with peak feeder and double action elevator.

Pressure loss in fluid hoses

Pressure drop is the resistance that prevents material from moving forward in the pipe. Two pipe variables influence this resistance : the (inside/internal) diameter and the pipe length. The pump will generate a pressure, strong enough to move the fluid material through the pipe (or hose) to the material pipe outlet. This pressure must be enough to overcome the original pressure drop.
While it is hard to reduce the pipe length, it is relatively easy to select an appropriate internal pipe diameter.

PRESSURE DROP CALCULATION

$$\text{Pressure loss (bar/m)} = \frac{6.9 \times \text{Flow (l/min)} \times \text{Viscosity (cps)}}{D^4 \text{ (int dia in mm)}}$$

$$\text{Pressure loss (psi/Ft)} = \frac{2.73 \times \text{Flow (gpm)} \times \text{Vicosity (cps)}}{D^4 \text{ (int dia in inches)}}$$

FLOW RATE CALCULATION

$$\text{Flow (l/min)} = \frac{\text{Pressure loss (bar/m)} \times D^4 \text{ (int dia in mm)}}{6.9 \times \text{Viscosity (cps)}}$$

$$\text{Flow (gpm)} = \frac{\text{Pressure loss (psi/Ft)} \times D^4 \text{ (int dia in inches)}}{2.73 \times \text{Viscosity (cps)}}$$

PIPE DIAMETER CALCULATION

$$\text{Interior Dia (mm)} = \sqrt[4]{\frac{6.9 \times \text{Flow (l/min)} \times \text{Viscosity (cps)}}{\text{Pressure Loss (bar/m)}}}$$

$$\text{Interior Dia (in)} = \sqrt[4]{\frac{2.73 \times \text{Flow (gpm)} \times \text{Viscosity (cps)}}{\text{Pressure loss (psi/Ft)}}}$$

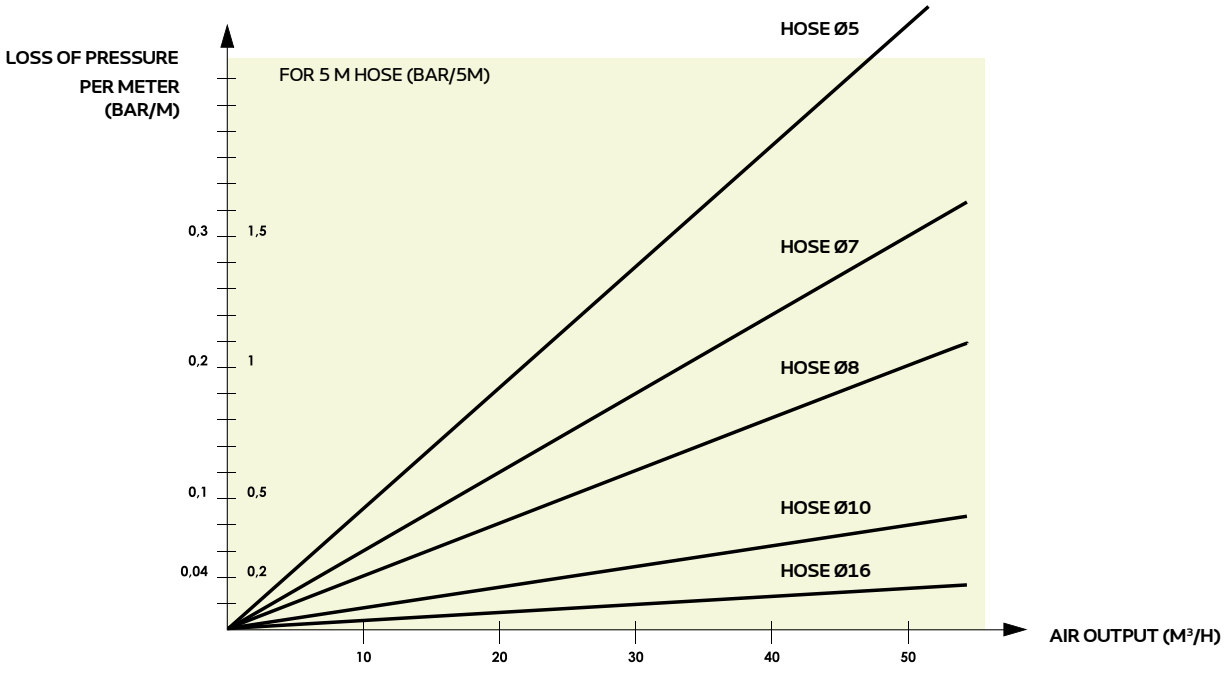
Pressure loss in fluid hoses



Electrostatic spraying : suitability of the equipment depending on the resistivity of the paints

- The wrap-around effect is optimized with paints of resistivity range of 5 - 50 MΩ.cm.
- Specific hoses allows for wrap-around effects for resistivity range higher than 2MΩcm.
- For water-based materials (0 MΩ.cm), a special Isocube enclosure allows to benefit from all the advantages of electrostatic spraying in complete safety.

List showing the compressed air consumption of normal air tools

We generally multiply the instant consumption by a coefficient of 0.5 to 0.9 to allow for the time the tool is not in use.

The average air volume delivered by a compressor of 1 CV is of 8 m³/h.

Tool	Consumption	
	l/mn	m³/h
Projection equipment	800 at 1 800	48 at 108
Riveter	450 at 1 500	27 at 90
Pneumatic drill	600 at 1 200	36 at 72
Linisher Ø 230	1 200 at 4 000	72 at 240
Drill 13 mm	600	36
Rotating sander	200 at 400	12 at 24

Tool	Consumption	
	l/mn	m³/h
Conventional gun	160 at 500	10 at 30
AIRMIX® gun	67 at 134	4 at 8
Pumps	160 at 1 350	10 at 80
Blower	200 at 400	12 at 24
Screwdriver	200 at 400	12 at 24

Calculate exactly the maximum air consumption of pump in l/mn: Q
The formula is :
Q = 1.2 x fluid output in liter at 20 cycles x pressure ratio x (air motor feeding pressure in bar + 1 bar for atmosphere)
EXAMPLE FOR A PUMP 16C240: Q = 1.2 x 4.8 x 16 x (6 + 1) = 645.12 l/mn or (645.12 x 60) : 1000 = 38.7 m3/h

Value of « PH »

The pH value of a liquid or a solution quantifies its concentration of hydrogen ions and tells us the extend to which it is acidic or alkaline. The PH value dictates the best materials to be used in construction of major paint handling and spraying equipment.

BOND • PROTECT • BEAUTIFY

With our manual guns, automatic and robotic applicators, supplied by our wide range of pumps and machines for fluid handling, dosing, mixing and dispensing **Sames** provides industrial solutions for production increase, quality improvement, material and cost savings.

We are designers and manufacturers of process equipment that is divided into **4 BRANDS,** 6 technologies and ranges:

sames kremlin

Liquid paint application solutions

Airspray
Coating technology that guarantees the highest finish.

\+

Airmix®
The perfect mix between finishing quality and productivity.

\+

Airless®
Most productive application technology to protect surfaces.

sames intec

Sealant and adhesives application solutions

sames nanocoat

Liquid coating application solutions for rotating bells, with and without electrostatic

sames inocoat

Powder coating application solutions
